

Notices of Assessment

The first option on the Reports Menu is Assessment Notices. Selecting this option first produces the Assessment Notices Menu, below.

The Assessment Notices Menu is divided into six options:

- ☐ The selection and printing of Change of Assessment Notices;
- ☐ The setting of flags that control the printing of Assessment Notices;
- ☐ The printing of a Real Property Change of Assessment Listing;
- ☐ The printing of a Personal Property Change of Assessment Listing;
- ☐ The printing of a Unique Zip Code Listing;
- ☐ The printing of FLPA Change of Assessment Notices.

Each of these options will be covered in detail following a review of the Assessment Notice Checklist, discussed next.

Assessment Notice Checklist

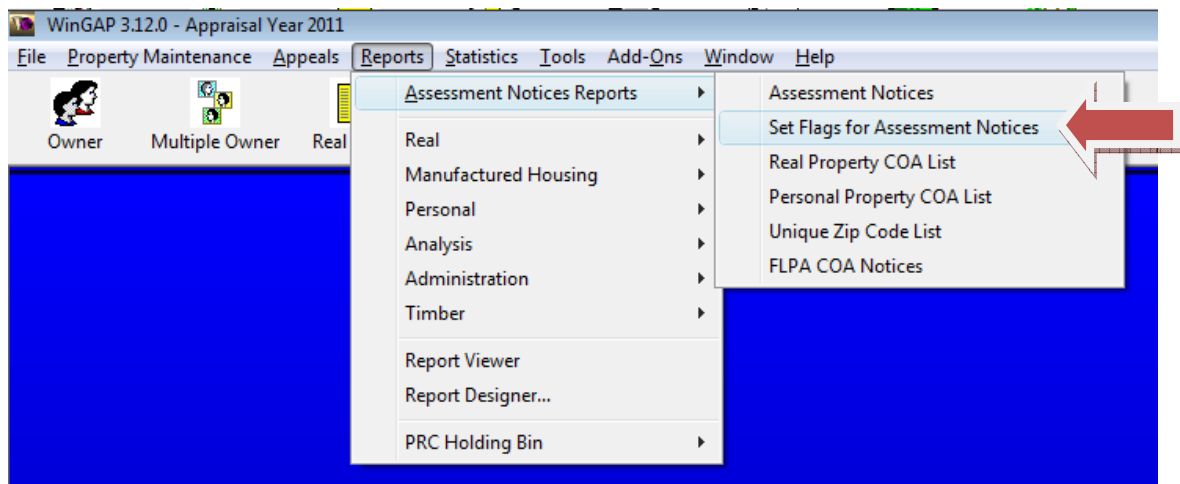

- 1) If schedule changes have been made, run reappraise for the property type that is impacted by the schedule modification (**Tools >> Re-Appraise**).
- 2) Make changes to Conservation Use tables per current year table of values and run Conservation Use reappraise (**Tools >> Re-Appraise >> Real Property**).
- 3) Run Data Edits (**Tools >> File Maintenance >> Data Edits**).

NOTE: If you receive an error concerning Visual FoxPro Libraries, contact Tech Support for assistance.

- 4) Correct Issues noted in Data Edits Report
- 5) Print a Consolidation Report (**Reports >> Administration >> Consolidation Report >> Digest**) for current digest year and compare it to the previous digest year's report looking for obvious errors (compare R1 to R1, R3 to R3, etc.)
- 6) Make sure that parcels receiving notices are assigned Change of Assessment reasons.
- 7) Set Assessment Change flags (**Reports >> Assessment Notices**).
- 8) Print a preliminary list of parcels receiving Change of Assessment notices for review. (Real Property COA List & Personal Property COA List)
- 9) Print Assessment Notices after review is complete.

Flagging Personal Property Accounts to Receive Assessment Notices

After the Data Edits procedure is run and Consolidation Reports are printed and reviewed, notices of assessment can be printed (Reports >> Assessment Notice Reports). With the passage of SB346 all real property parcels will receive notices of assessment, regardless of value change. However, personal property accounts will need to be flagged as before. This can be done with the Set Flags for Assessment Notices option. The flagging procedure should be run before printing the COA lists.

This option on the Reports >> Assessment Notices Menu allows the user to set or remove the Assessment Notice Flag for each parcel (located in the logical field Realprop.Val_Chg) or Account (located in the logical field Personal.Notice). Selecting this option produces the Set Flags for COA Notices Form, as seen on the next page.

Setting Assessment Notice flags allows the user to select the parcels or accounts that Assessment Notices will be printed for. Only parcels or accounts that have the assessment flag set to "True" will have an Assessment Notice printed. The flagging and unflagging routines will only affect the records of the property type that has been selected in the Property Type radio button section located on the upper left of the form, either Real or Personal, as seen above. The Assessment Notice flags are set by selecting any of the six checkboxes in the Flags section:

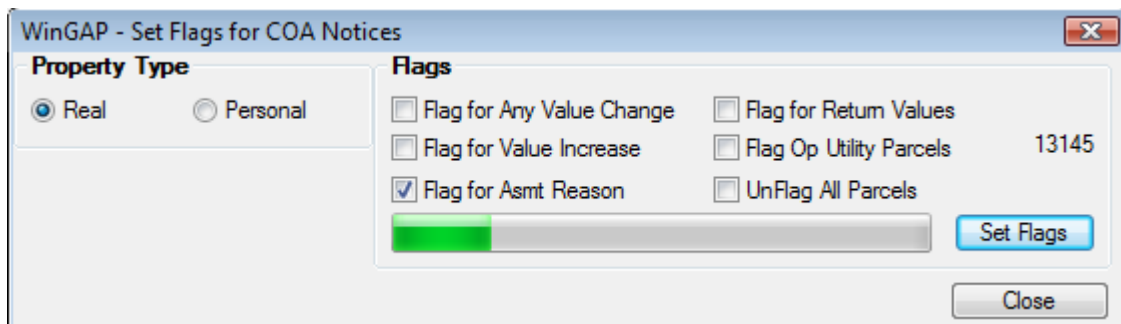

- 1) Flag for Any Value Change will set the assessment flag to "True" for all parcels that have **a difference in value** between the current and previous year with the exception of parcels/accounts that have been assigned a digest classification of Exempt or Utility or any parcels/accounts that have an assessment reason code of NN (No Notice Needed).
- 2) Flag for Value Increase will set the assessment flag to "True" for parcels where the current value is **greater** than the previous value with the exception of parcels/ accounts that have been assigned a digest classification of Exempt or Utility or any parcels/accounts that have an assessment reason code of NN (No Notice Needed).
- 3) Flag for Asmt Reason will set the assessment flag to "True" for any parcel that has at least one Assessment Reason associated with it with the exception of parcels/ accounts that have been assigned a digest classification of Exempt or Utility or any parcels/accounts that have an assessment reason code of NN (No Notice Needed).
- 4) Flag for Return Value will set the assessment flag to "True" for any parcel where a Return Value has been entered with the exception of parcels/accounts that have been assigned a digest classification of Exempt or Utility or any parcels/accounts that have an assessment reason code of NN (No Notice Needed).
- 5) Flag Op Utility Parcels will set the assessment flag to "True" for any parcel that has a Digest Classification/Stratification of Operating Utility (U2).

- 6) Unflag All Parcels will set the assessment flag to "False" for all parcels, in preparation for flagging a notice for a particular condition.

Any or all of these checkboxes can be selected at the same time with the exception of the "UnFlag all Parcels" checkbox. If the Unflag all Parcels checkbox is selected, the other checkboxes are deselected. Very often the user will click the "Unflag All Parcels" checkbox first, then click the "Set Flags" Button to set the Assessment Notice flags to "False".

Once all flags have been removed, the user can select any of the other Checkboxes to use as the criteria for printing Assessment Notices. All desired checkboxes must be selected before clicking the **Set Flags** button. If, after clicking the Set Flags button, it is determined that an additional box should have been checked, the user must re-check all original boxes and then check the additional box before running Set Flags. After a checkbox(s) is selected, the Set Flags Button should be clicked to set (or unset) the flags. The setting or removing of flags will apply to all Parcels/Accounts.

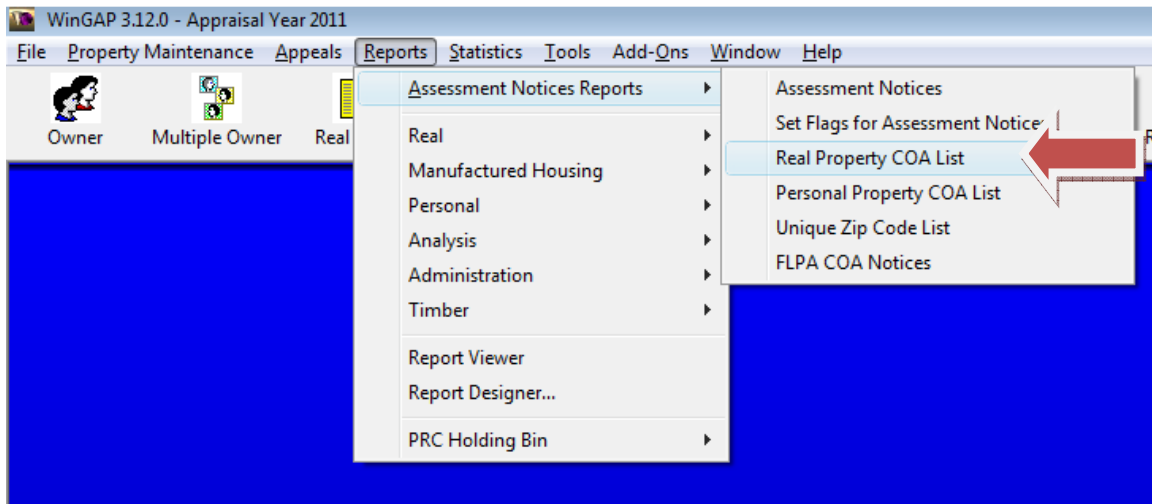

As the parcels/accounts are flagged/unflagged, the user is presented with a bar graph and a running count of the process, as seen below.

At the conclusion the flag setting process, a message will appear informing the user of the number of parcels/accounts that were flagged, as seen below.

Real Property COA List

Selecting this option on the Assessment Notices Reports submenu produces a print preview of the Real Property Change of Assessment Listing, as shown on the next page.

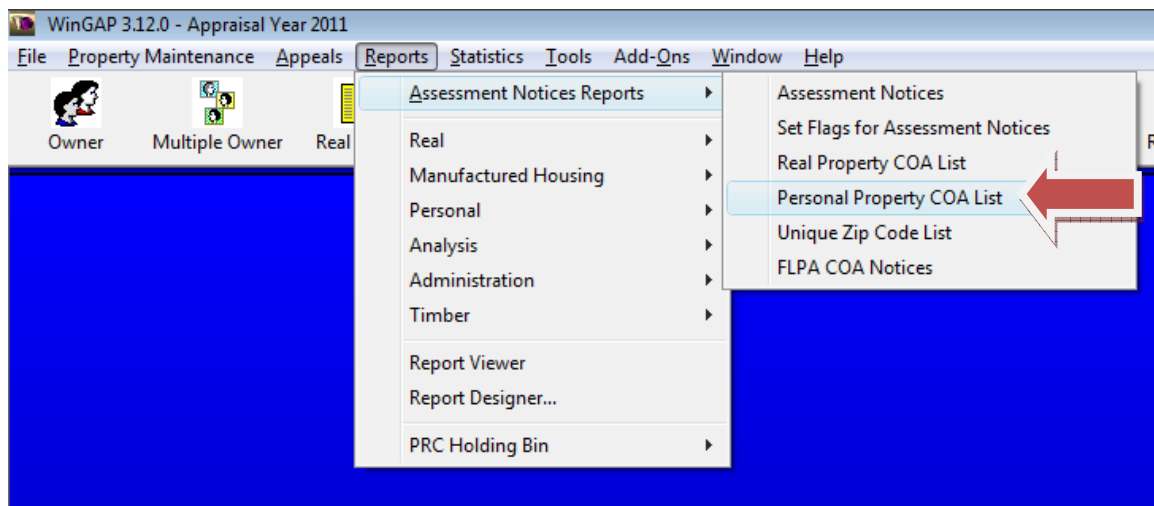

This report contains a list of all real property that has been flagged for an Assessment Notice.

070502124	ORANGE	NJ

This report can be used when printing Change of Assessment notices by zip code.

FLPA COA Notices

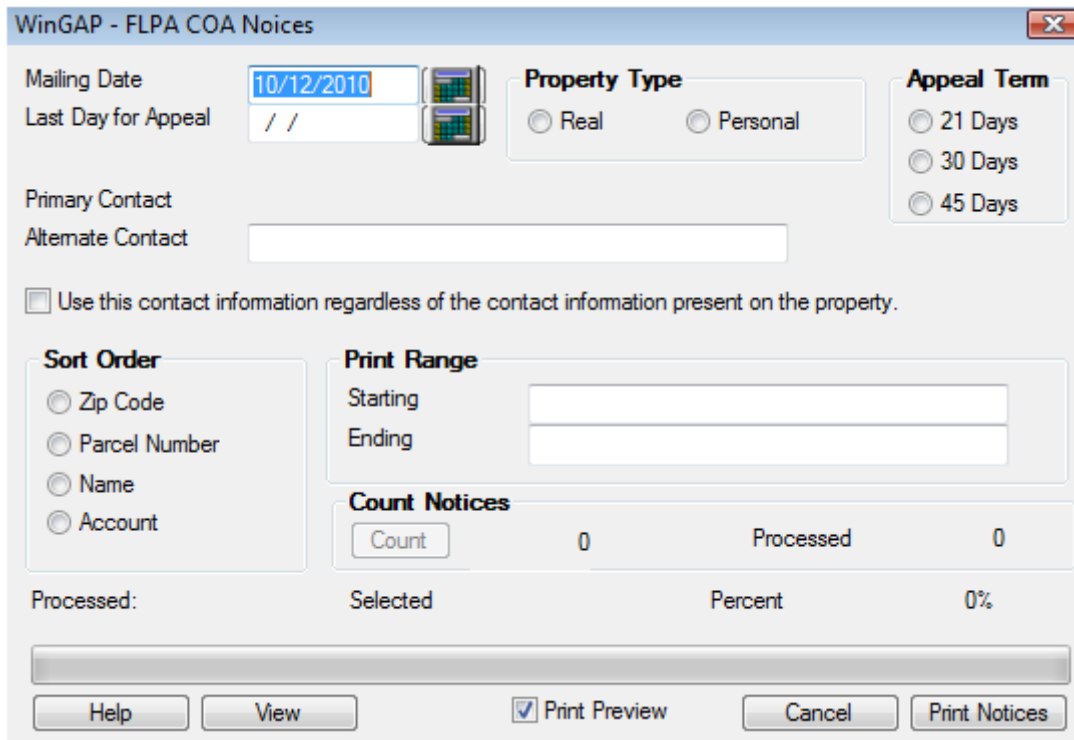

Clicking on this option on the Assessment Notices Reports submenu produces the Data Edits message window, as shown below. **It is extremely important** that the Data Edits routines, which check for such things as owners without property, property with no value, etc., be performed prior to the printing of Assessment Notices. If the Data Edits routines have not been previously performed, they can be run now by selecting the "Yes" option on the window below.

NOTE: Data Edits procedures are explained in more detail under **Tools >> File Maintenance >> Data Edits**, covered later in this manual.

If the Data Edits routines are run, various reports will display, allowing the user to correct the discrepancies found on these reports prior to printing the Assessment Notices. Closing the report preview window, or selecting the "No" option above, will produce the FLPA COA Notices Form, as seen on the next page. The printing of FLPA Assessment Notices is controlled from this Form. A discussion of all the fields on the Change of Assessment Form follows.

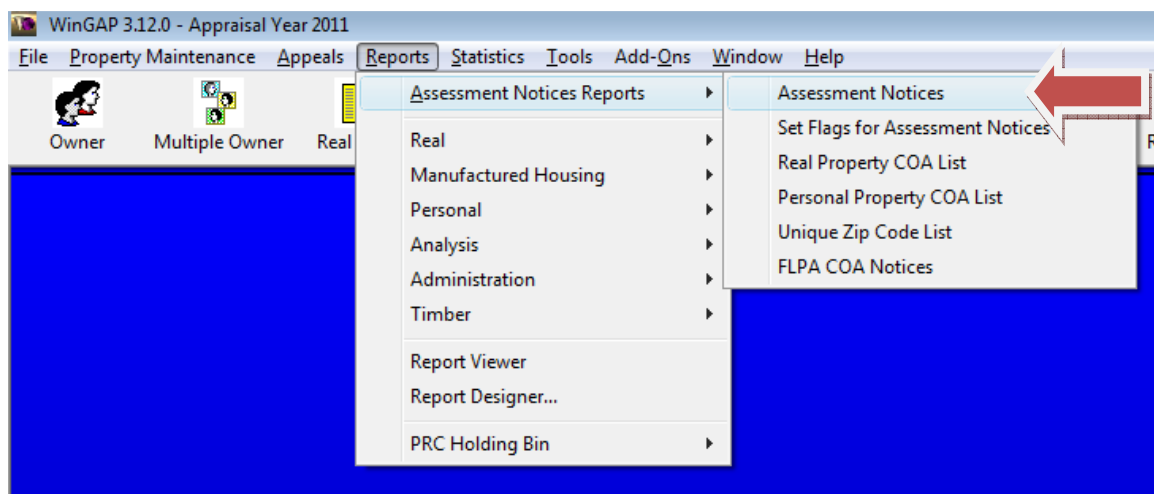

The dialog box is titled "WinGAP - FLPA COA Notices". It contains several sections:

- Mailing Date:** A date field showing "10/12/2010" and a "Last Day for Appeal" field with slashes " / /".
- Property Type:** Radio buttons for "Real" and "Personal".
- Appeal Term:** Radio buttons for "21 Days", "30 Days", and "45 Days".
- Contact Information:** Fields for "Primary Contact" and "Alternate Contact".
- Checkbox:** "Use this contact information regardless of the contact information present on the property."
- Sort Order:** Radio buttons for "Zip Code", "Parcel Number", "Name", and "Account".
- Print Range:** Fields for "Starting" and "Ending".
- Count Notices:** A table with columns "Count", "Processed", and "Percent". The "Count" field shows "0" and "Processed" shows "0".
- Processed:** A section with "Selected" and "Percent" (showing "0%").
- Buttons:** "Help", "View", "Print Preview" (checked), "Cancel", and "Print Notices".

The printing of FLPA COA notices is very similar to the printing of regular Assessment Notices. See the discussion directly below in the Section called "Printing Change of Assessment Notices" for the procedures to use in printing these notices.

Printing Change of Assessment Notices

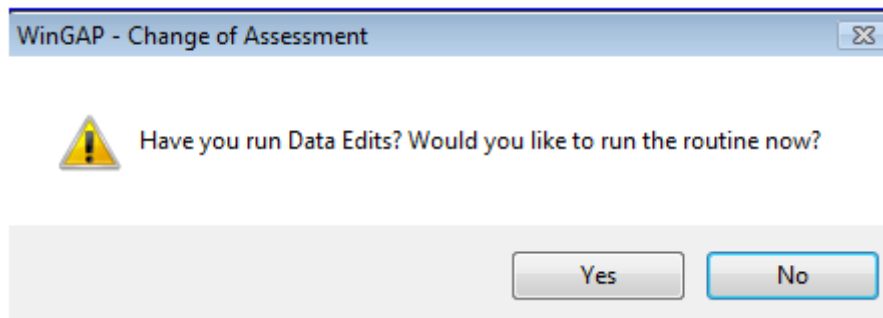

Clicking on this option on the Assessment Notices Reports submenu produces the Data Edits message window, as shown on the next page. **It is extremely important** that he

WinGAP Administration

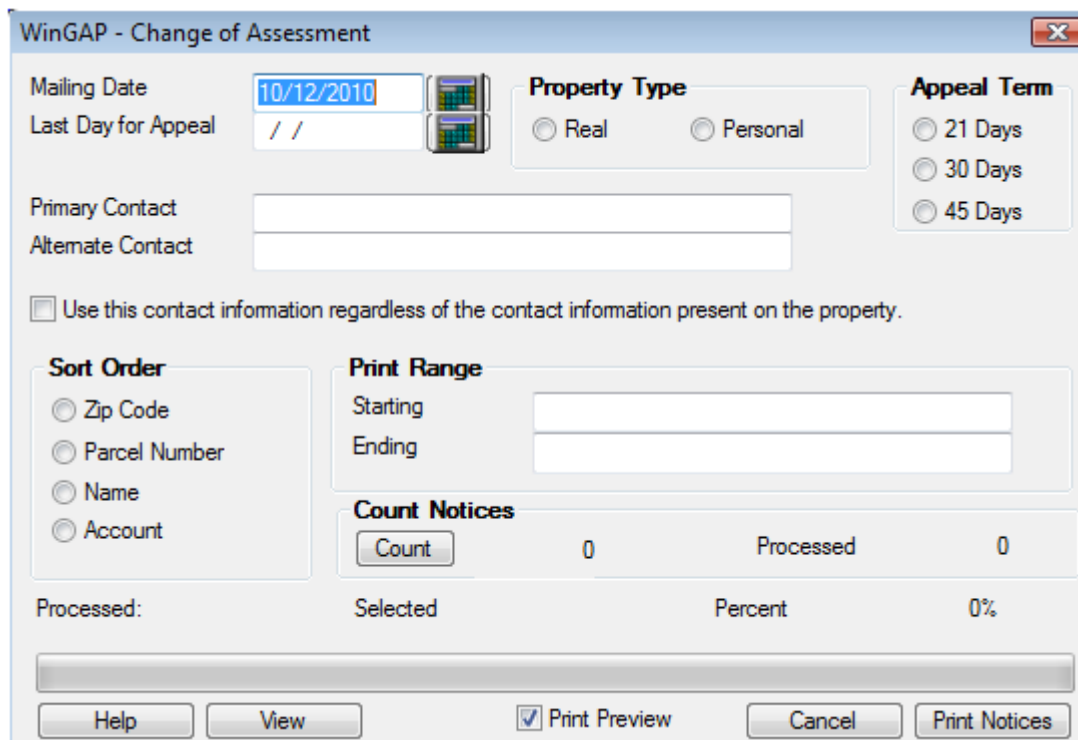

Data Edits routines, which check for such things as owners without property, property with no value, etc., be performed prior to the printing of Assessment Notices. If the Data Edits routines have not been previously performed, they can be run now by selecting the "Yes" option on the window below.

NOTE: Data Edits procedures are explained in more detail under **Tools >> File Maintenance >> Data Edits**, covered later in this manual.

A dialog box titled "WinGAP - Change of Assessment" with a close button in the top right corner. Below the title bar is a yellow warning triangle icon followed by the text "Have you run Data Edits? Would you like to run the routine now?". At the bottom of the dialog are two buttons: "Yes" and "No".

If the Data Edits routines are run, various reports will display, allowing the user to correct the discrepancies found on these reports prior to printing the Assessment Notices. Closing the report preview window, or selecting the "No" option above, will produce the Change of Assessment Form, as seen below. The printing of Assessment Notices is controlled from this Form. A discussion of all the fields on the Change of Assessment Form follows.

A form titled "WinGAP - Change of Assessment" with a close button in the top right corner. The form contains several sections:

- Mailing Date:** A date field showing "10/12/2010" and a calendar icon.
- Last Day for Appeal:** A date field showing " / /" and a calendar icon.
- Property Type:** Two radio buttons labeled "Real" and "Personal".
- Appeal Term:** Three radio buttons labeled "21 Days", "30 Days", and "45 Days".
- Primary Contact:** A text input field.
- Alternate Contact:** A text input field.
- ☐ Use this contact information regardless of the contact information present on the property.
- Sort Order:** Four radio buttons labeled "Zip Code", "Parcel Number", "Name", and "Account".
- Print Range:** Two text input fields labeled "Starting" and "Ending".
- Count Notices:** A table with two columns: "Count" and "Processed". The "Count" column has a value of "0" and the "Processed" column has a value of "0".
- Processed:** A table with four columns: "Selected", "Percent", and "0%".

At the bottom of the form are several buttons: "Help", "View", "Print Preview" (with a checked checkbox), "Cancel", and "Print Notices".

- **Mailing Date:** The Date that the Notices will be mailed is keyed in this field. The date in the field defaults to the system date of the computer.
- **Last Day for Appeal:** The Last Day that the taxpayer can file an appeal either by mail or in person at the Assessors Office is keyed in this field.
- **Property Type:** The Property Type radio button section of the Form defaults to Real if the user tabs to the section from the Last Day for Appeal Field. One of the Property Types should be selected by clicking with the mouse, and tab will take the user to the Appeal Term section.
- **Appeal Term:** The Appeal Term radio button section of the Form defaults to 21 Days if the user tabs to the section from the Property Type Section. One of the types of Appeal Terms must be selected by clicking with the mouse, and tab will take the user to the Primary Contact field.
- **Primary Contact:** The name of the Primary Contact for Assessment Notices is keyed in this field; otherwise a name such as "Assessors Office" can be keyed. Regardless, some name MUST be keyed in the Primary Contact field before Assessment Notices can be printed. This information will be used in the absence of an Appraisers name on the parcel or account for which an assessment notice is being printed.
- **Alternate Contact:** The name of the Alternate Contact for Assessment Notices is keyed in this field; otherwise a name such as "Assessors Office" can be keyed. Regardless, some name MUST be keyed in the Alternate Contact field before Assessment Notices can be printed. This name will be used in the absence of an Primary Contact on a parcel or account.
- **Use this contact information regardless of the contact information present on the property:** If this box is checked, the Primary Contact and Alternate Contact entered in the fields above the checkbox will be used for the COA notices, regardless of the selections on the Real and Personal Property General Information forms. Both the Primary and Alternate Contact must have an entry before the box can be checked.
- **Sort Order:** The Sort Order radio button section of the Form defaults to Zip Code if the user tabs to the section from the Secondary Contact field. One of the Sort Order types must be selected by clicking with the mouse, and tab will take the user to the Print Range section of the Form. The Sort Order that is selected will also control what is keyed into the Beginning and Ending Print Range fields.
- **Print Range:** The Print Range section of the Change of Assessment Form allows the user to choose a Beginning and Ending range for the Assessment Notices to be printed.
 - ☐ If **Zip Code** is selected as the Sort Order, a Beginning and Ending Zip Code range can be keyed into the two Print Range fields to limit the Assessment Notices that are printed to just those zip Codes. If ALL Assessment Notices in Zip Code order

- are desired, the user should leave the fields blank.
- ❑ If **Parcel Number** is selected as the Sort Order, a Beginning and Ending Parcel Number range can be keyed into the two Print Range fields to limit the Assessment Notices that are printed to just those Parcel Numbers. If ALL Assessment Notices in Parcel Number order are desired, the user should leave the fields blank.
 - ❑ If **Name** is selected as the Sort Order, a Beginning and Ending Name range can be keyed into the two Print Range fields to limit the Assessment Notices that are printed to just those Names. If ALL Assessment Notices in Name order are desired, the user should leave the fields blank.
 - ❑ If **Account** is selected as the Sort Order, a Beginning and Ending Account Number(Real key) range can be keyed into the two Print Range fields to limit the Assessment Notices that are printed to just those Accounts. If ALL Assessment Notices in Account order are desired, the user should leave the fields blank.
- **Count Notices:** The Count Button in the Count Notices section of the Change of Assessment Form can be clicked to see how many Notices have been flagged for printing. A window will appear with the total number that have been flagged for the Property Type selected (Real/ Personal). The Count ignores any Range that has been entered.
 - **Print Notices:** Once the user has selected the criteria for printing the Assessment Notices, the Print Notices button can be clicked, a progress bar will display at the bottom of the Change of Assessment form with the number of records processed, and the number of notices selected for printing will display. If the Print Preview checkbox has been selected (this is the default for the Change of Assessment Form, and it is recommended that the user leave it this way), a Print Preview will appear, as seen on the next page; otherwise, if the Print Preview box is unchecked, the Assessment Notices will be sent to print at the default printer.
 - **Print Preview:** If the Print Preview box is checked, the user will be presented with the Print Preview window of the first Assessment Notice that will be printed, as shown on the next page. The Print Preview window must be closed to use the View button, discussed on the next page.

NOTICE TO TAXPAYER
Annual Assessment Notice - Contents

1. The assessment notice sent to taxpayers by the County Board of Tax Assessors shall be in accordance with and shall contain those requirements set forth in Georgia Title 48-6-306.
2. The amount of your ad valorem tax bill for this year will be based on the appraised and assessed values specified in this notice.
3. You have the right to appeal these values to the county Board of Tax Assessors followed by an appeal either to the county Board of Equalization or to Arbitration and in either case, to appeal to Superior Court.
4. If you wish to file an appeal, you must do so in writing no later than 45 days after 10/11/2010 which is on or before 10/11/2010.
5. If you do not file an appeal by this date, your right to file an appeal will be lost.
6. For further information on the proper method of filing an appeal, you may contact the county Board of Tax Assessors at the address and phone number listed above.
7. Your staff contacts are Gregg Reese and Steve Burnette.
8. Information used to arrive at the fair market value is available upon request in the Assessor's Office.

Reasons for Assessment Notice

C2 - Land Split into two or more parcels
 NO - New Owner
 NO - New Owner

The taxpayer's name, address, and property information print at the top of the Assessment Notice, with the required legal information in the middle of the Notice. A list of Assessment Reasons print at the bottom of the Notice. The Print Preview window controls at the top of the window (Menu or Tool Bar) can be used to print the Assessment Notices.

- **View:** If the user wants to see a list of those Parcels/Accounts that have been flagged AND selected for printing, the View Button on the lower left of the Change of Assessment Form can be clicked to produce a list of all Assessment Notices that are about to be printed, as seen below. Before clicking the View Button however, the user must click the OK button and Preview the first Notice to be printed, then close the Preview Window (the Print Preview box must be checked to do this). The list that is displayed after the View Button is clicked is easier to view than scrolling through all the Assessment Notices on the Preview window.

[illegible]

At the conclusion of printing (or previewing) the Assessment Notices a message will appear, shown on the next page, asking if the Assessment Notices that have just been printed should be appended into the Notices Archive. If the County wants to keep an archival file of all Assessment Notices that have been printed, the "Yes" button should be clicked, at which point the Notices will be appended and the user notified and returned to the Change of Assessment Form. Otherwise, the "No" button should be clicked, the Notices will not be appended, and the user will be returned to the Change of Assessment Form. After printing, the Assessment Notices can be reviewed for accuracy, folded and placed in window envelopes for mailing.

The Assessment Notices are archived into the table, Notices.dbf. This provides the user with a means of recovering information, such as date printed, values, etc, for any notice that has been printed. Also, when an appeal is added the notice date is pulled from the archived data. Currently, the only means of accessing data from the notices.dbf is with Visual FoxPro or ReportPro.

Printing Assessment Notices to a PDF File

In lieu of printing notices to a printer initially, the County may opt to print the notices to an electronic format such as a PDF or a ReportPro Archive. Printing to an electronic format provides several advantages. First of all, a copy of the notices is automatically created. Also, the electronic file can serve as a backup which can be used in the case of re-prints. The file provides a means of quickly locating a notice especially if the PDF format is selected.

To print to a PDF format requires PDF software. A variety of PDF software is available, from free programs to those costing hundreds of dollars. Below and on the next page are two of the many free or inexpensive PDF software programs

NOTICE TO TAXPAYER
 Annual Assessment Notice - Contents

- The assessment notice sent to taxpayers by the County Board of Tax Assessors shall be in accordance with and shall contain those requirements set forth in Georgia Title 48-5-306.
- The amount of your ad valorem tax bill for this year will be based on the appraised and assessed values specified in this notice.
- You have the right to appeal these values to the county Board of Tax Assessors followed by an appeal either to the county Board of Equalization or to Arbitration and in either case, to appeal to Superior Court.
- If you wish to file an appeal, you must do so in writing no later than 45 days after 08/22/2005 which is on or before 09/30/2005.
- If you do not file an appeal by this date, your right to file an appeal will be lost.
- For further information on the proper method of filing an appeal, you may contact the county Board of Tax Assessors at the address and phone number listed above.
- Your staff contacts are a and b.
- Information used to arrive at the fair market value is available upon request in the Assessors' Office.

7. Your staff contacts are a and b
8. Information used to arrive at the fair market value is available upon request in the Assessors' Office.

Reasons for Change

10 - LAND ENTERED INTO CONSERVATION USE COVENANT

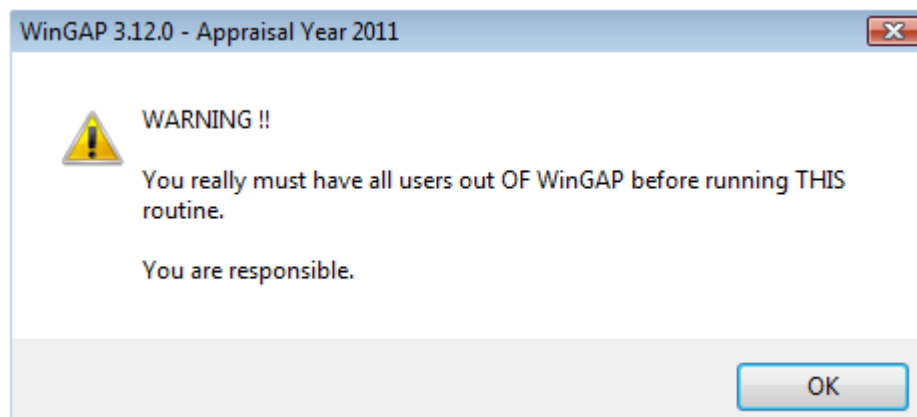

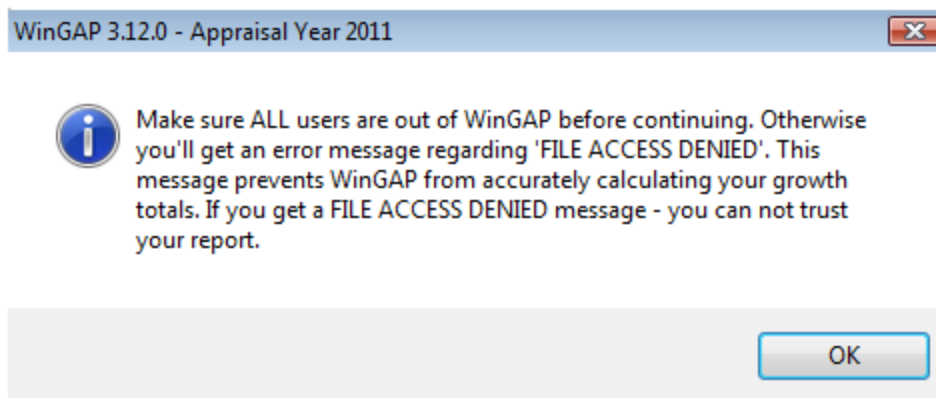

Regardless of how notices are printed, after the printing is done, assessment notice flags should be cleared to prepare for 21-day notices and other printing. The flags are cleared with the "Unflag" option on the Reports >> Assessment Notice Reports >> Set Flags for Assessment Notices menu.

Digest Submission

Growth Calculations

The second option on the **Tools >> File Maintenance** menu runs the **Growth Calculations** routine, which determines the amount of Inflationary Growth per parcel. This routine **MUST** be run before advertising millage rates and digest submission. Clicking on this option produces two messages, below, that stress the importance of having all other users out of WinGAP:

All users must be out of WinGAP for the data on the Growth Calculations report to be accurate. Clicking OK on the two messages or pressing Enter will produce a print preview of the Inflationary/Real Growth Summary, as shown below, for each Tax District in the County.

10/12/2010 14:46:02 Inflationary/Real Growth Summary 1

Tax District	01	Infl Growth - 100%	Infl Growth - 40%	Exemption Reassmt - 40%
	Infl Growth	261,099	104,440	0
Tax District	02	Infl Growth - 100%	Infl Growth - 40%	Exemption Reassmt - 40%
	Infl Growth	-1,556,280	-622,512	0
Tax District	03	Infl Growth - 100%	Infl Growth - 40%	Exemption Reassmt - 40%
	Infl Growth	0	0	0
Tax District	04	Infl Growth - 100%	Infl Growth - 40%	Exemption Reassmt - 40%
	Infl Growth	0	0	0
Tax District	05	Infl Growth - 100%	Infl Growth - 40%	Exemption Reassmt - 40%
	Infl Growth	0	0	0
	Total Infl Growth	-1,295,181	-518,072	0

The end of the report will display a county-wide summary of inflationary growth numbers, as highlighted above.

Processing COA Types and Growth Values

As mentioned earlier, before advertising millage rates and digest submission, the amount of inflationary growth for each parcel must be determined, and is accomplished by running the Growth Calculations report.

This procedure **MUST** be run prior to providing growth figures for millage rate determination and/or digest submission.

Reasons Schedule and Assigning Reasons to Property

The assignment of COA reasons and their associated COA Types during the data entry of information related to parcels and reappraising when schedules were updated comprised the first step in the process of determining growth amounts.

The following screen shot depicts a COA reason that is associated with Real Property. When the Property Type is Real or All, the user must define the COA Type as Inflationary, Real Growth or a Parcel Split/Combination. The assignment is made by clicking the checkbox associated with the desired COA Type. The user will not be allowed to exit the screen unless a COA Type assignment is made.

Reason Code	Reason Description	Reason Type
A BE	BOARD OF EQUALIZATION CHANGE	R
A CA	CHANGED OR CORRECTED ACRES	R
A CN	CORRECTED FIRST NOTICE	R
A CP	CARPORT ADDED	R
A DG	DETACHED GARAGE ADDED	R
A DK	DECK ADDED	R
A EG	ENCLOSED GARAGE OR CARPORT	R
A ET	EXEMPT TO TAXABLE	R
A GR	GARAGE ADDED	R
A HR	HOUSE REMODELED OR IMPROVED	R
A IC	IMPROVEMENT COMPLETE	R

Code: Reason Type:

Reason:

Property Type:

☐ Inflationary
☒ Real Growth
☐ Parcel Split / Combination

Buttons: Help, Cancel, New, Delete, Apply, OK

The assignment of the COA Type is critical to the digest submission procedure due to the need to determine the amount of inflationary growth within an appraisal/digest year. The user should be careful in making the correct assignment due to the potential impact on digest submission. The COA Type assignment will be printed along with the COA reason as part of the Digest Submission Reports and reviewed for correctness by DOR personnel.

As mentioned above COA reasons are assigned one of three types, Inflationary, Real Growth or Parcel Split/Combination. Each of the COA Types will be discussed in detail below.

An Inflationary assignment is made if the COA reason indicates that a change in value is due to reassessment. Reassessment can also be categorized as revaluation or reappraisal

and associated with a change in property valuation schedules or a change to a parcel's property characteristics. When assigned to a parcel, a reason with a COA Type of Inflationary will result in the change in value in its entirety or a portion of the value changed being placed in the inflationary growth field.

Real Growth is assigned to a reason when the reason depicts a change in property value that is due to the addition or deletion of property components. Reasons, such as an ownership change, that are not characteristic of a value change should be assigned a Real Growth COA Type. Reasons with a Real Growth COA Type will not contribute to inflationary growth.

The Parcel Split/Combination COA Type is assigned when the reason defines the fact that the parcel has been split or combined with a new parcel or the acreage or lot dimensions have been changed due to a survey or correction in a deed. A Parcel Split/Combination reason will not contribute to inflationary growth.

The following table is provided to give the user some examples of reasons/value change situations and proper COA Type assignments.

COA Reason	COA Type
Change in Ownership	Real
Parcel split	Split/Combination
Parcels combined	Split/Combination
Acreage/Land Dimension Change	Split/Combination
Improvement added	Real
Improvement deleted	Real
Addition to Existing Improvement	Real
Removal of Area from Existing Imp	Real
Improvement remodeled	Real
Improvement Characteristics Modified (grade, exterior walls, physical depreciation, obsolescence, % complete, etc.)	Inflationary
Reassessment/Revaluation	Inflationary
Zoning Change	Inflationary
Accessibility/desirability Change	Inflationary
Land Use Change	Inflationary
Land Class Change	Inflationary
Covenant application accepted	Real
Covenant application denied	Real
Schedules Updated	Inflationary

When a COA Type is changed on the Assessment Reasons screen, WinGAP will sync the COA Type with reasons that have been assigned to a parcel. The user will not be required to modify each parcel to implement the change.

The second and final step involves running the growth procedure to segregate real growth and inflationary growth. Parcels in a Conservation Use or FLPA covenant have no inflationary growth calculated. For parcels not in such covenants, the procedure will check the COA reasons assigned to each parcel for their COA Type and process the change in value accordingly.

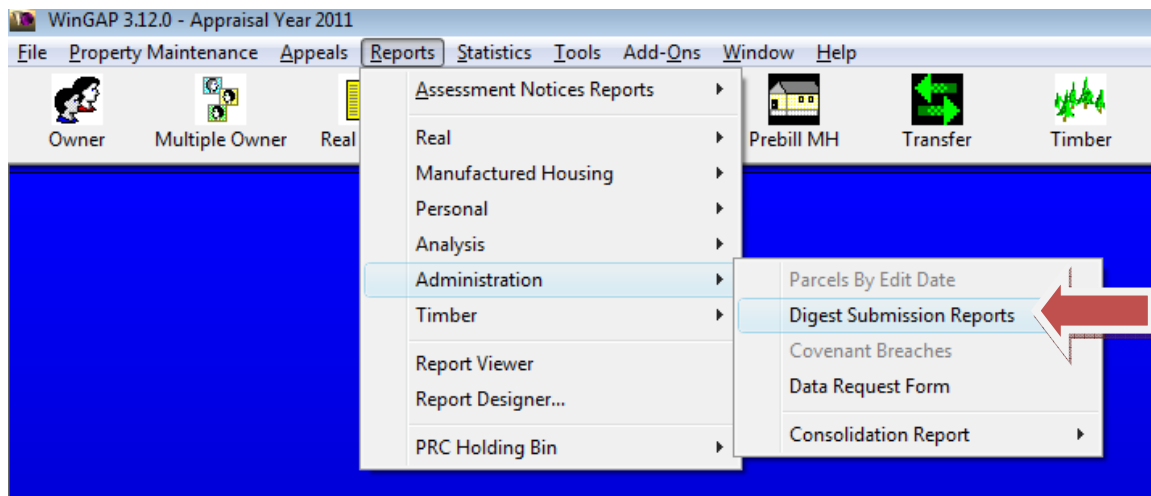

A COA Type of Inflationary will result in the difference between current value and previous value being calculated as inflationary growth. New construction will be deducted from the inflationary growth.

Real growth COA Types will result in no contribution to inflationary growth. The value difference between current and previous value will be considered as real growth. If an inflationary reason is also assigned to the parcel, a portion of the value difference may contribute to inflationary growth.

In situations where a COA reason with a Split/Combination COA Type exists on a parcel, no inflationary growth will be calculated. In addition, parcels with a zero previous value will not be assigned any inflationary growth regardless of the COA Type.

The inflationary growth per tax district will be printed as stated earlier at when the Growth option is run within WinGAP. The inflationary growth numbers will also be printed with the other Digest Submission reports.

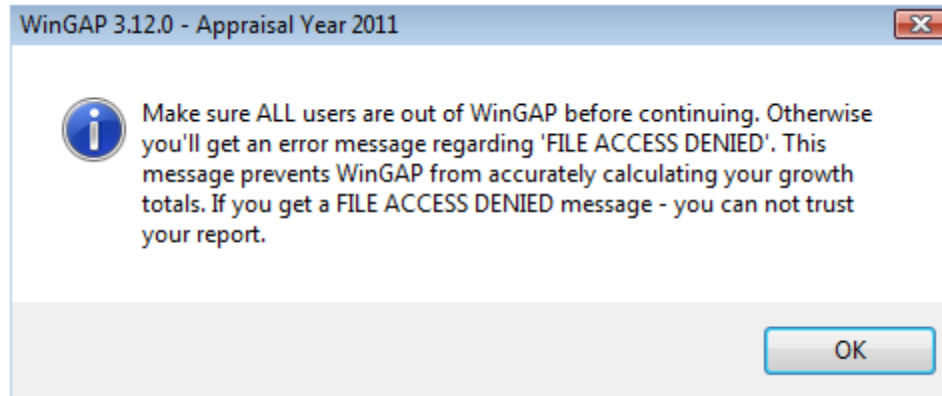

Digest Submission Reports

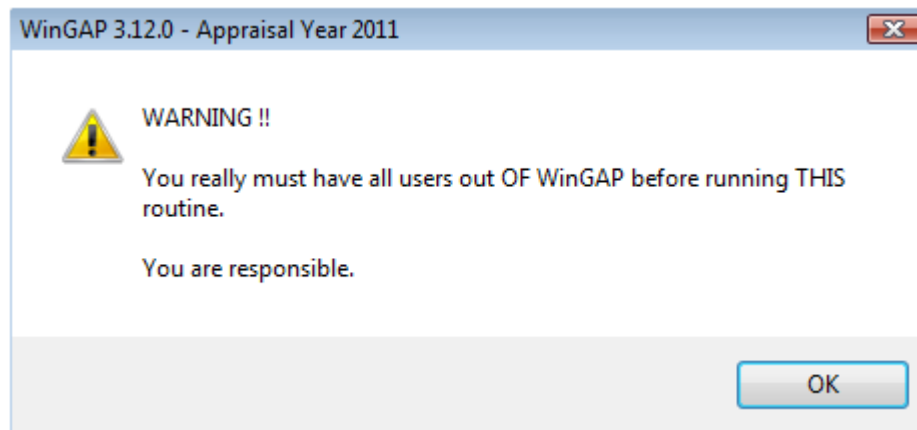

NOTE: When running the Digest Submission Reports, it is no longer necessary to run a separate Growth Calculations routine that determines the amount of inflationary growth for each parcel, found at **Tools >> File Maintenance >> Growth Calculations**, as that routine is now run as part of the Digest Submission Reports process.

IMPORTANT: Before running any Digest Submission reports, the Assessors office should do the following:

- Ensure that all Appeals that have been resolved have been marked as such in the current appraisal year. This applies to appeals from back years as well as current year appeals
- Ensure that every WinGAP user is out of WinGAP when the Digest Submission Reports are run. When the user clicks on the Digest Submission Reports option on the **Reports >> Administration** submenu, the message below will display.

Clicking OK on this message will produce a second message.

Clicking OK on the second message will produce a Print Preview of several reports that are required when submitting the Tax Digest to the Local Government Services Division.

Change of Assessment Lists

The first set of Digest Submission reports are the **Change of Assessment Lists**. Only parcels with inflationary growth will be printed on the Change of Assessment Lists. The list will be printed only when less than 50% of the parcels have received a change of assessment notice. The percentage is calculated based on the number of parcels with a change of assessment notice compared to the total number of parcels in the county. The report will be broken down into the various digest classifications.

Below is an example of the **Change of Assessment List for Agricultural Property**.

Digest Export Procedures

Creating and uploading the Digest Files will be covered in detail following a review of the Digest Submission Checklist, discussed next.

Digest Submission Checklist

- 1) Check for schedule changes and make sure the appropriate Reappraise has been run. This includes all covenants (Conservation Use & FLPA)
- 2) Run State Homestead Reappraise
- 3) Re-run Data Edits routine and check for errors.
- 4) Print a Consolidation Report (**Reports >> Administration >> Consolidation Report >> Digest**) for current digest year and compare it to the previous digest year's report looking for obvious errors (compare R1 to R1, R3 to R3, etc.).
- 5) Print an Inflationary Growth report within WinGAP (**Tools >> File Maintenance >> Growth Calculations**).
- 6) Run the Digest Submission reports (**Reports >> Administration >> Digest Submission Reports**).
- 7) Preview results.
- 8) Print Inflationary Growth page of Digest Submission Reports.
- 9) If official Consolidation Sheets/Reports are needed for submission of figures to County Commissioners, Board of Education, etc. for determination of rollback rates and millage rates, export digest files (**File >> Export >> Digest Files**, discussed next) for the digest vendor to produce consolidation reports.
- 10) Contact the digest vendor when files are uploaded.
- 11) When final digest files are to be submitted, export digest files again.

Exporting Digest Files

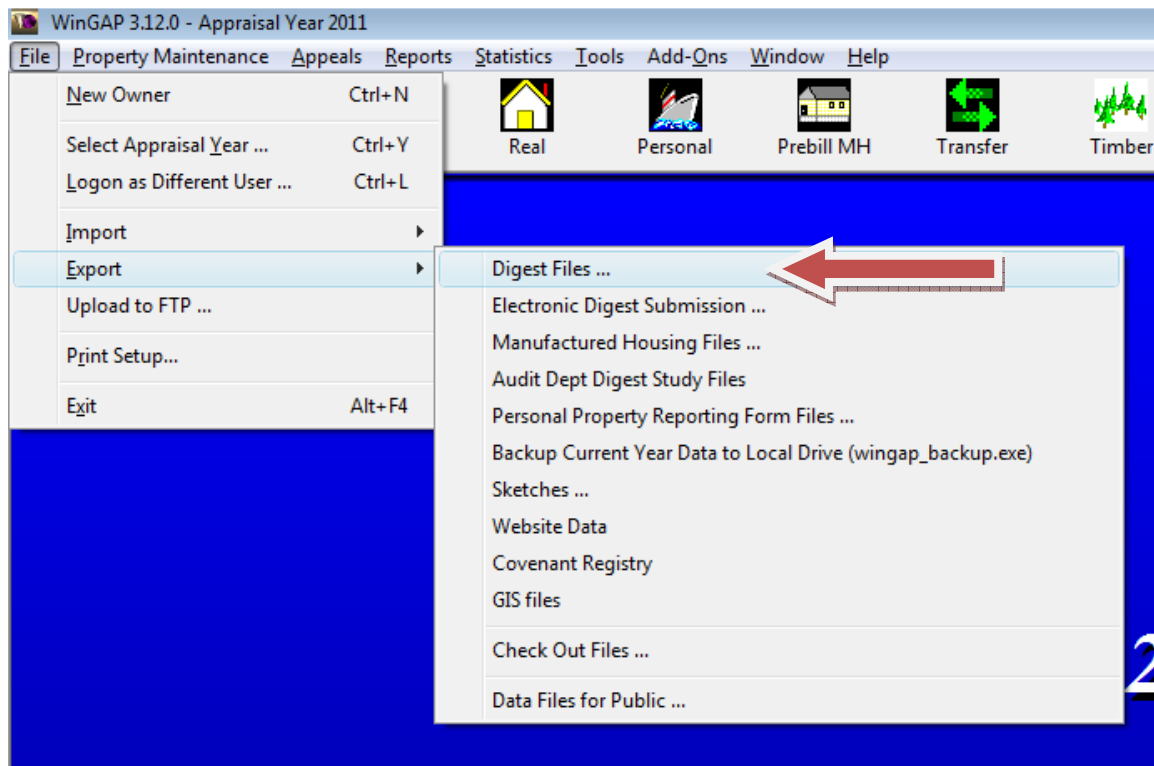

NOTE: If the Digest upload process is to be performed at the end of the Export Digest Files process, the computer this procedure is performed on must have an active Internet connection.

Selecting the Digest Files option on the **File > Export Menu**, next page, first produces the Data Edits message window, also shown on the next page. **It is extremely important**

WinGAP Administration

that the Data Edits routines, which check for such things as owners without property, property with no value, etc., be performed prior to the exporting of any digest data. If the Data Edits routines have not been previously performed, they can be run now by selecting the "Yes" option.

NOTE: Data Edits procedures are explained in more detail under [Tools >> File Maintenance >> Data Edits](#), covered earlier in this manual.

If the Data Edits routines are run, various reports will display, allowing the user to correct the discrepancies found on these reports prior to exporting any data. Closing the report preview window, or selecting the "No" option above, will begin the digest export process that allows the user to create the text files that are sent to the tax digest service bureaus for creation of the tax digest.

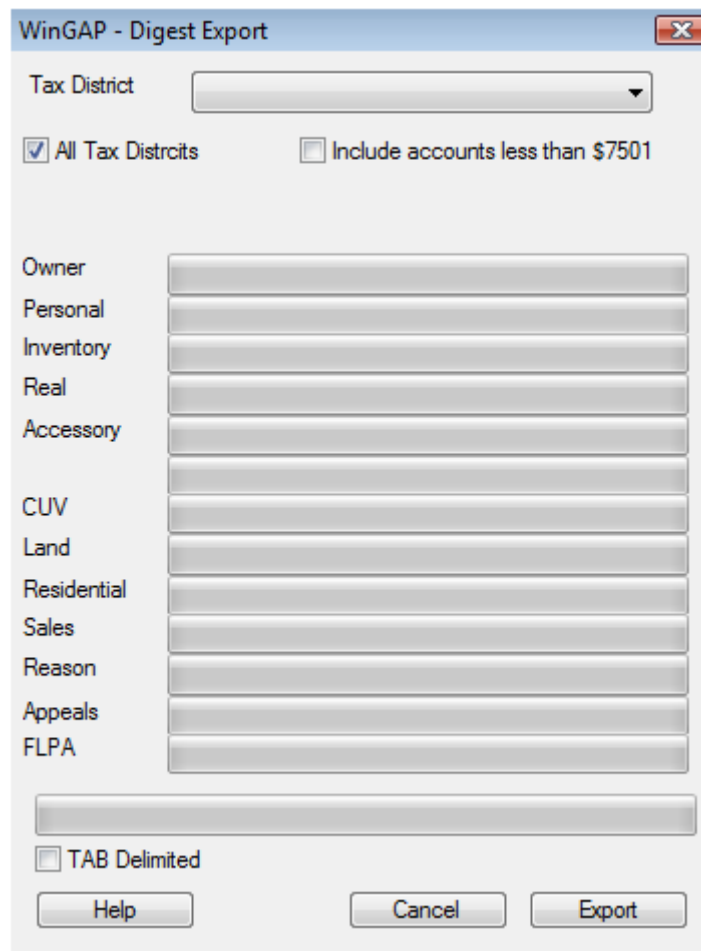

WinGAP Administration

The first screen that appears is called the Digest Export form, seen below. The Form has two defaults:

- ☐ All Tax Districts
- ☐ Include Personal Property Accounts under \$7501

If these are the correct options, the user should click the Export Button and proceed. Otherwise, the All Tax Districts checkbox can be unchecked and a single Tax District selected by clicking on the Tax District combo box at the top of the Form. If Personal Property Accounts under \$7501 should not be included in the Digest Export, that checkbox should be unchecked as well.

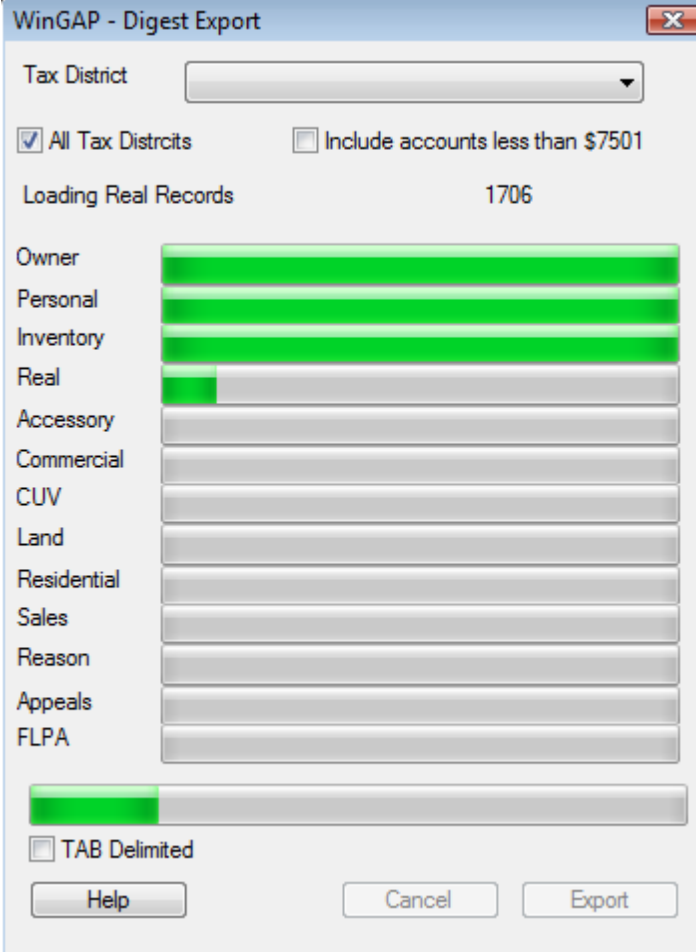

NOTE: one of the above options, either an individual Tax District, or all Tax Districts, MUST be selected in order for WinGAP to proceed).

The image shows a Windows-style dialog box titled "WinGAP - Digest Export". At the top, there is a "Tax District" label followed by a dropdown menu. Below this, there are two checkboxes: "All Tax Districts" (which is checked) and "Include accounts less than \$7501" (which is unchecked). In the center, there is a list of categories on the left and corresponding empty text boxes on the right. The categories are: Owner, Personal, Inventory, Real, Accessory, CUV, Land, Residential, Sales, Reason, Appeals, and FLPA. At the bottom, there is a "TAB Delimited" checkbox (unchecked) and three buttons: "Help", "Cancel", and "Export".

WinGAP will "export" the data and create the digest files in the appropriate WinGAP data directory. Various progress bars will appear, next page, as the files are created. Once the Export process begins, the Cancel Button is disabled and the user cannot abort the process.

If the digest vendor prefers a delimited data set, the TAB Delimited checkbox should be checked prior to clicking Export.

The image shows a screenshot of the "WinGAP - Digest Export" dialog box. At the top, there is a "Tax District" dropdown menu. Below it, there are two checkboxes: "All Tax Districts" (checked) and "Include accounts less than \$7501" (unchecked). A label "Loading Real Records" is followed by the number "1706". Below this is a list of categories: Owner, Personal, Inventory, Real, Accessory, Commercial, CUV, Land, Residential, Sales, Reason, Appeals, and FLPA. Each category has a corresponding progress bar. The "Owner", "Personal", and "Inventory" bars are fully green. The "Real" bar is partially green. The other bars are grey. At the bottom, there is a "TAB Delimited" checkbox (unchecked) and three buttons: "Help", "Cancel", and "Export".

Once the digest files are created, the Zip Files form will appear, as shown on the next page. All of the digest text files will be pre-selected and highlighted in blue. Unlike previous versions of WinGAP, it is no longer necessary for the user to select the files. Files that are not to be zipped can be unselected by holding the Ctrl key down and clicking on the file.

Note: If the user accidentally deselects ALL of the files, they can be re-selected in one of three ways:

- The user can click the **Select All** button to select all of the files in the list box.
- The first file in the list can be selected by left clicking on it with the mouse, The user can then locate the last file in the list, hold the Shift key down, and then click on the last file with the left mouse button
- The Ctrl Key can be held down and each individual file can be selected by clicking on it with the left mouse button.

WinGAP Administration

- If an incorrect selection is made, the **Select None** button will deselect the files that have been selected

Once the file selection has been made, the user should click the **Zip Files** Button to zip the files.

Note: Prior to zipping the files, the existing digest.zip file will be renamed to digest_ + date of file + time if file + .zip. The digest.zip file will continue to be the file that should be uploaded.

Once the files are "zipped", the Zip File creation message window, below, will appear, and the user should note the location of the Zip file that was created.

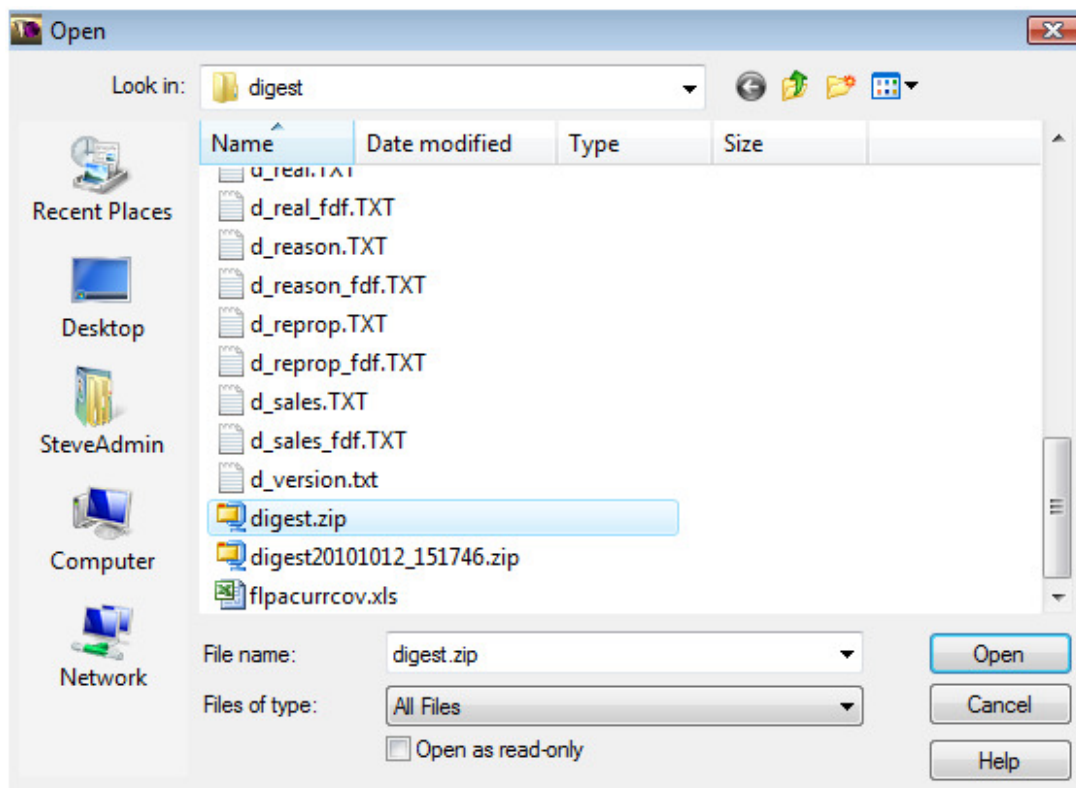

WinGAP Administration

The OK Button on the this message window should now be clicked to return to Zip Files form, where the Cancel button should be clicked. This will produce the Upload Files to FTP Form, as seen below.

The Digest Upload Form greatly simplifies the process of delivering the digest files to the County's tax digest service bureau. There is no longer any need to copy the files to tape, diskette, or CD-ROM. All of the service bureaus used by WinGAP Counties can download the digest files from the WinGAP FTP site.

To upload the digest files, the user should click the **Browse**  button to the right of the Select File to upload field. This will produce the Open dialog box, below, which defaults to the Digest Folder that was created during the Digest Export process. The user should locate and then click on the **digest.zip** file to highlight it, then click the Open button. This will place the file along with its complete path in the Select File to Upload field on the Upload Files to FTP, as seen on the next page.

The user should then click the **Begin Upload** button, and the file will be uploaded to that County's folder on the WinGAP FTP site. Various messages will display as the file is uploaded. The user will be informed if the upload was successful, and returned to the Upload Files to FTP form. The **Cancel** button on this form can be clicked to return to the main WinGAP Screen. After the file is uploaded, the County should call or email the digest service bureau and inform them that the file has been uploaded.

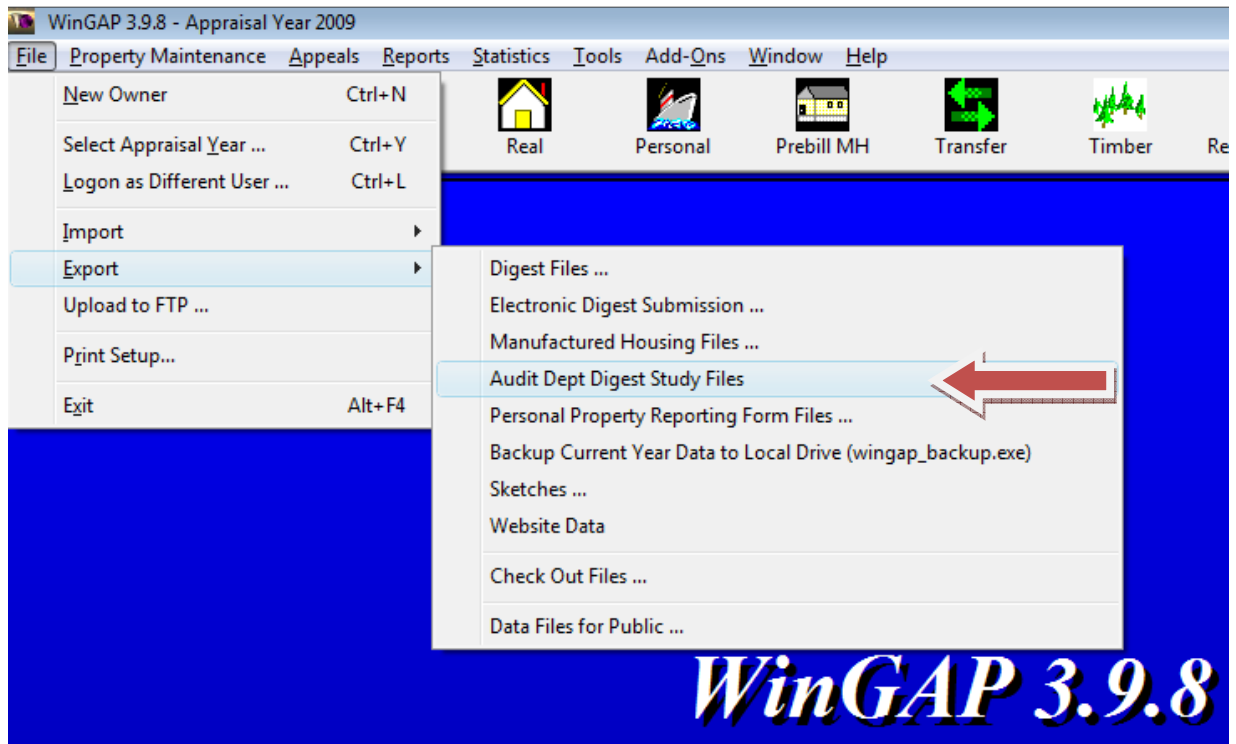

If the upload is not successful, for instance, the user's Internet connection is not functioning, the user will receive an error message similar to the one below, and the user can try again later to upload the digest files.

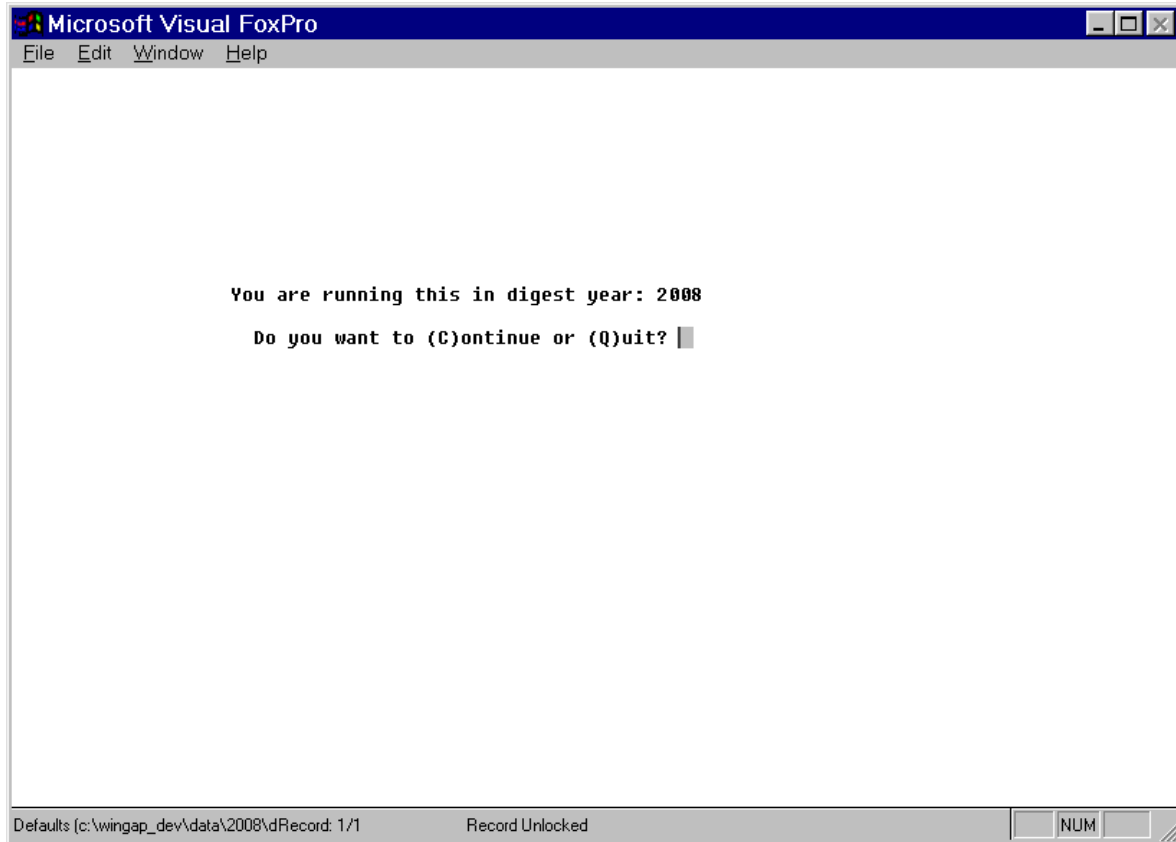

NOTE 1: The Digest Export routine accommodates HB 380 which states that, when possible, a tax bill shall be sent to the owner as of Jan 1 and to the current owner. The Digest Export routine will search all New Owner and Future records for ownership changes, and when different from the Live Owner information, it will place the New Owner or Future Owner data in the d_real digest file. New Owner data will take precedent over Future Owner data.

NOTE 2: The Digest Export routine will generate an email that will be sent to Vicki Lambert, Director, Local Government Services, DOR. The email will contain a URL (Uniform Resource Locator) that links to a spreadsheet (flpacurrcov.xls) in the County folder on the WinGAP FTP site. The spreadsheet contains the FLPA Covenants that were added during the digest year. This file is also located in the temp\digest folder. The data in the file will be used to create the State registry for FLPA Covenants.

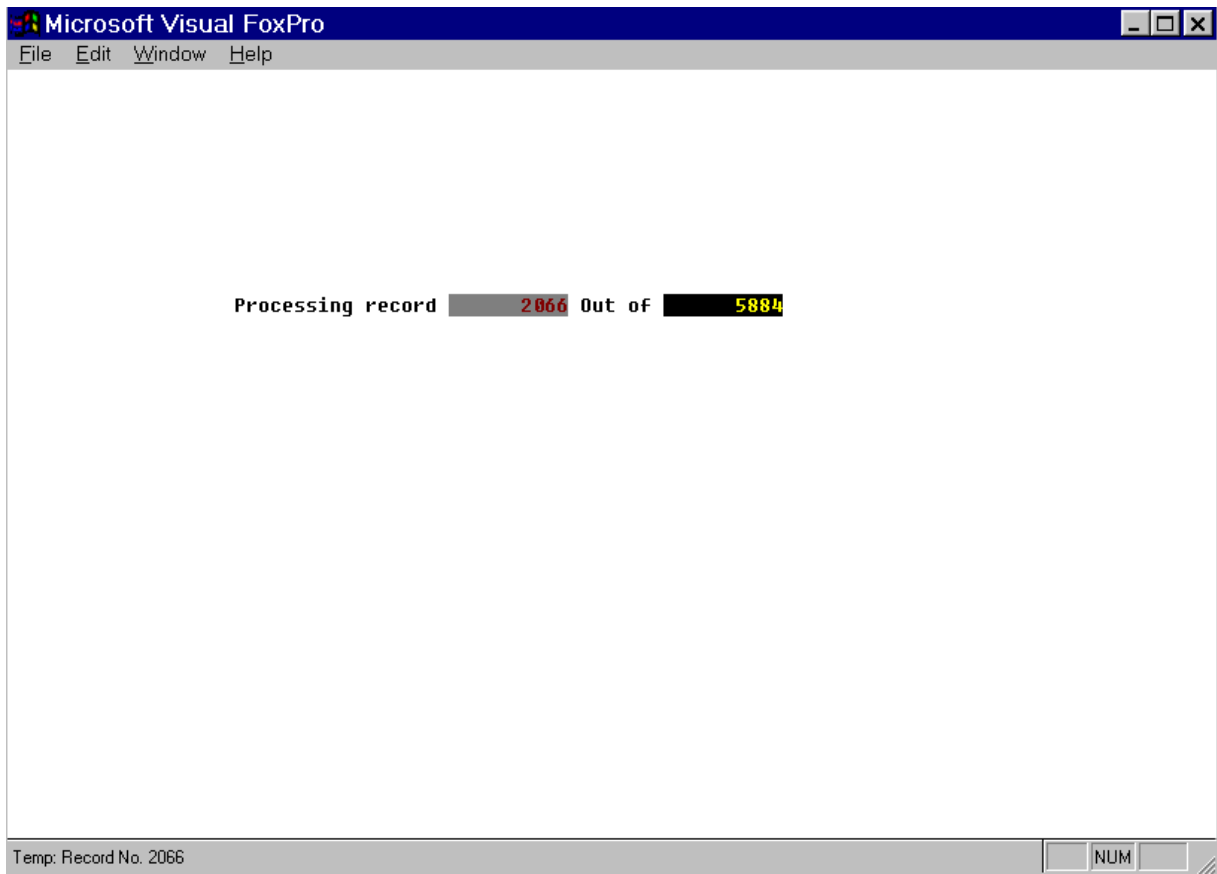

Audit Department Digest Study Files

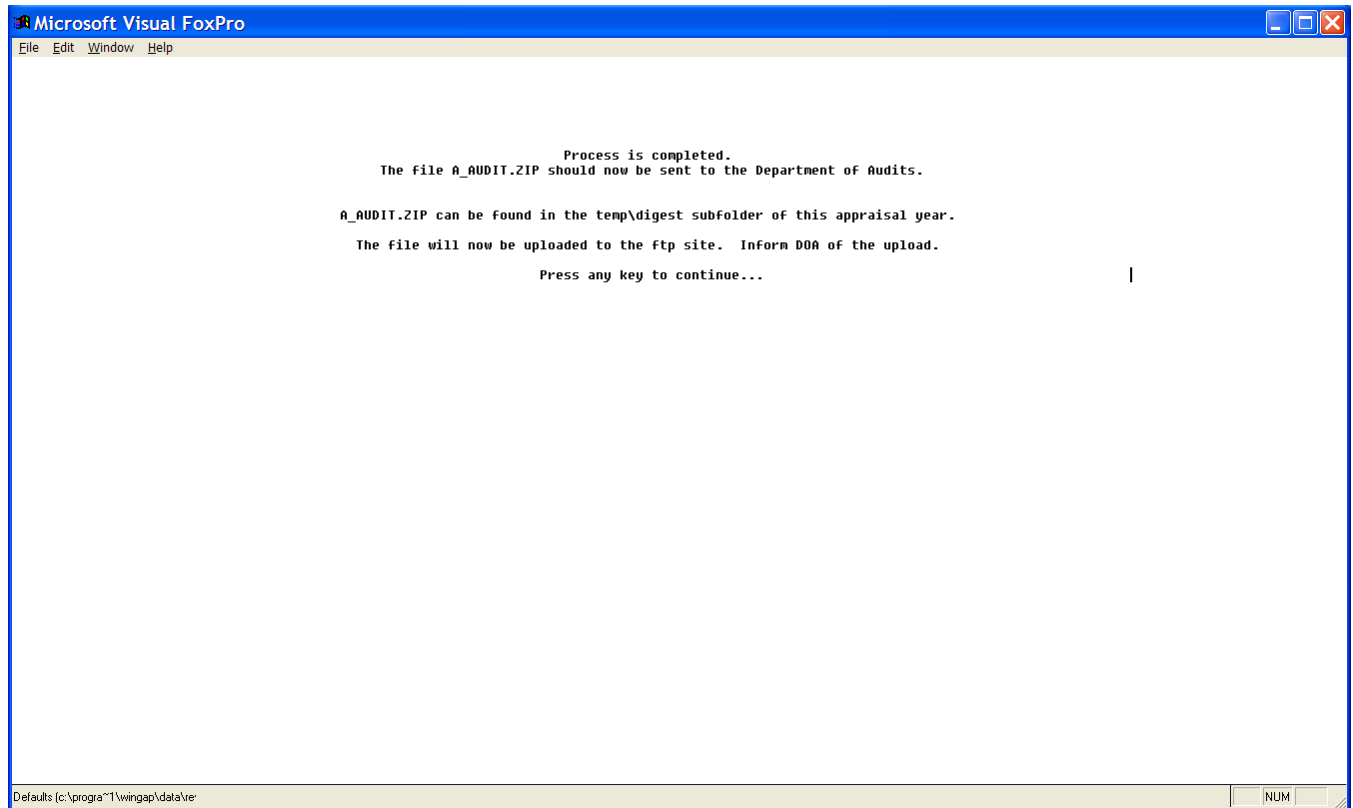

The fourth option on the Export sub-menu will produce the Audit Department Digest Study Files. Clicking this option runs a FoxPro routine and produces a message window, as seen on the next page.

As the message indicates, a "C" is keyed to continue, a "Q" to quit. Keying a "C" will start the process of creating the Audit Department files, and the screen on the next page will appear as the records are processed.

At the conclusion of the process another window will appear informing the user that the files have been created and are ready to be uploaded, as seen on the next page.

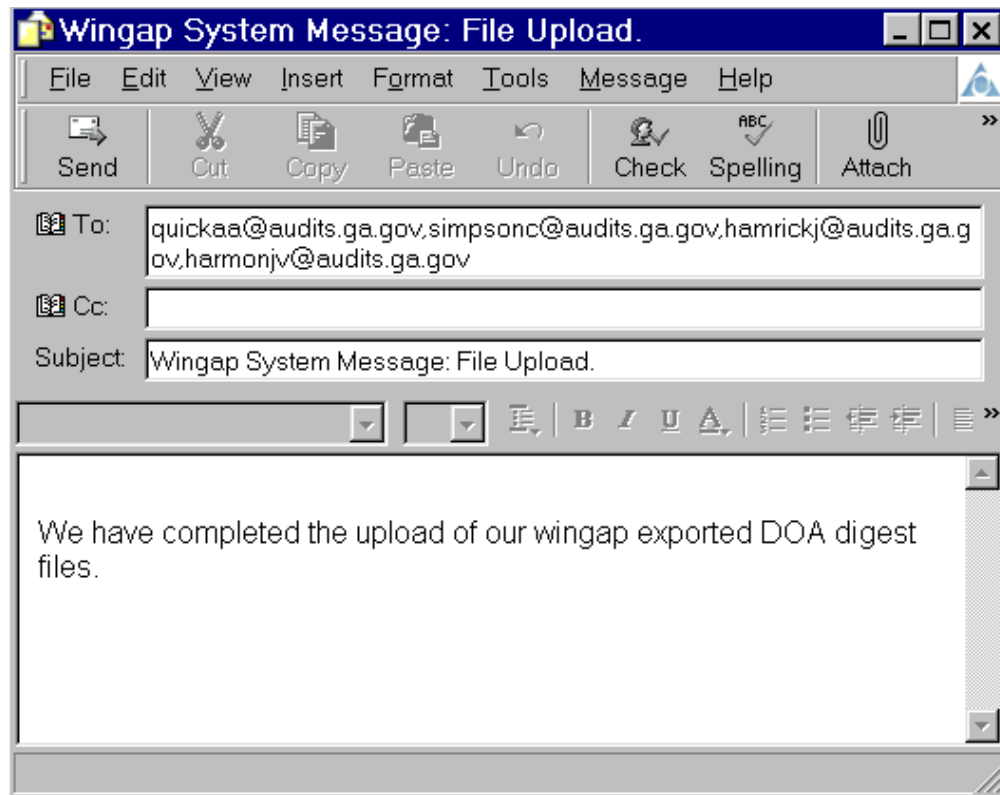

Any key can be pressed to produce the Upload Files to FTP Form, as seen below.

The Digest Upload Form greatly simplifies the process of delivering the digest files to the County's tax digest service bureau. There is no longer any need to copy the files to tape, diskette, or CD-ROM. All of the service bureaus used by WinGAP Counties can download the digest files from the WinGAP FTP site.

As opposed to the other Digest upload procedures, the user does not have to navigate to the file and select it; the Audit Department Digest File is already selected for upload. The user should click the **Begin Upload** button, and the file will be uploaded to that County's folder on the WinGAP FTP site. Various messages will display as the file is uploaded. The user will be informed that the upload was successful, and returned to the Upload Files to FTP form. The **Cancel** Button on the form is clicked at this point, which will launch the County's default email program, as seen on the next page.

The user should click the Send Button on the email form to notify the Audit Department that the Audit Department digest files have been uploaded. Once this is done, the user will be returned to the main WinGAP Screen.

If the upload is not successful, for instance, the user's Internet connection is not functioning, the user will receive an error message similar to the one below, and the user can try again later to upload the digest files.

Performing WinGAP Version Updates

WinGAP updates are required throughout the year. The updates contain “fixes” for reported issues and new features that have been added to WinGAP. An email is sent to all WinGAP users with notification that an update is ready for installation. Below is an example of a typical update email notification.

The 3.12.0 update is now available. This is a major update and must be done by all counties before October 1, 2010. The update includes phase 1 of the handling of the “Sales Value” per SB346, modifications to FTP access and a number other modifications. All of the changes are included in the WinGAP_Chgs.pdf which accompanies the update and can be accessed from the Help menu in WinGAP.

The reason for the update deadline of October 1 is the FTP access. On October 1, we will disable the gacounty@wingap.com login. With the update each county will have its own unique login which will be assigned when you run WinGAP. When the “gacounty” login is disabled, you will not be able to upload digest or website exports or download any of the ABOS, NADA and DNR updates that will be out within the next couple of weeks.

The changes for SB346 include the placement of the notice flag on all parcels as well as the assignment of parcel values when an arm’s length transaction occurs in 2010 or later and the net sales price is less than the MAV/FMV of the parcel. The assignment of value based on the sales price will be on a pro rata land/improvement-to-total value basis. Fields will be added to accommodate the “sales” values.

The second phase of the SB346 sales value changes will relate to reports such as PRC’s, notices, digest submission, etc. Hopefully, this can be prepared for release by the first of November.

More detailed information on the SB346 workings will be provided at the conference and the document will be available for download Monday morning. I will send an email with the link to the SB346 document.

The update instructions are the same as they were for the last release of 3.11 and are attached. There are two additional steps that must be taken with this update.

After the strucfix process is run on the data years and if you have rolled to 2011, you will need to open the Sales Reason schedule and flag the Arm’s Length Transaction reasons by checking the so named box to the right of the Reason field. The box should be checked only for those reasons that are to be considered as Arm’s Length.

When the Sales Reasons are flagged, the Data Edits routine should be run. The “Select Edits” option is the one you will need to implement and place a Y in the field to the right of “List SB346 Sales”.

The routine will provide you with a list of all 2010 Arm's Length sales that have a sales price less than the MAV/FMV of the property. Using the list, you will need to open the sales screen on these parcels, select the sale in the list and respond to the SB346 prompt that will display. The process will load the sales values in their proper fields.

The update instructions are generally provided as an attachment to the email. Following are a set of instructions for an update. The instructions will change on occasions based on special requirements that an update may have.

Version 3.12.000 Update Instructions

A new update has been posted to the ftp site. This update adds many new features to WinGAP. (see Help >> WinGAP Version Changes for more details) Before performing this update, you must be running **Version 2.0.0 or greater**. **If you are currently running a version of WinGAP that is less than 2.0.0 contact DOR Tech Support.**

The update must be run on a computer where WinZip 9.0 and the WinZip Command Line applications have been installed. These are available at no charge at www.wingap.net. To download and install the **WinZip** (not WinGAP) files:

1. Click on the **eFile PT61** link
2. proceed to the **Password Protected Download** link at the bottom of the page.
The password login is ga.county and the password is wingapuser.
3. download the WinZip 9.0 install file (wzsite90.exe)
4. download the WinZip Command Line install file (wzcline.exe)
5. after the download, double click the wzsite90.exe and install.
6. take the default options on all prompts
7. double click the wzcline.exe and install
8. take the default options on all prompts

If you are currently running a version of WinGAP that is less than 2.0.0 contact DOR Tech Support.

If you are running Advantage Database Server, you MUST upgrade to Version 7.0 or greater before installing WinGAP Version 3.12.000.

If you are running a version of WinGAP earlier than 3.6.0, be certain to read the steps concerning moving photos to their individual folders. The instructions dealing with the moving of photos can be found on the last page of the update instructions beginning with Step 13.

Please read the instructions for this update before proceeding. The update procedure has been modified.

The instructions for updating WinGAP to Version 3.12.000 are as follows:

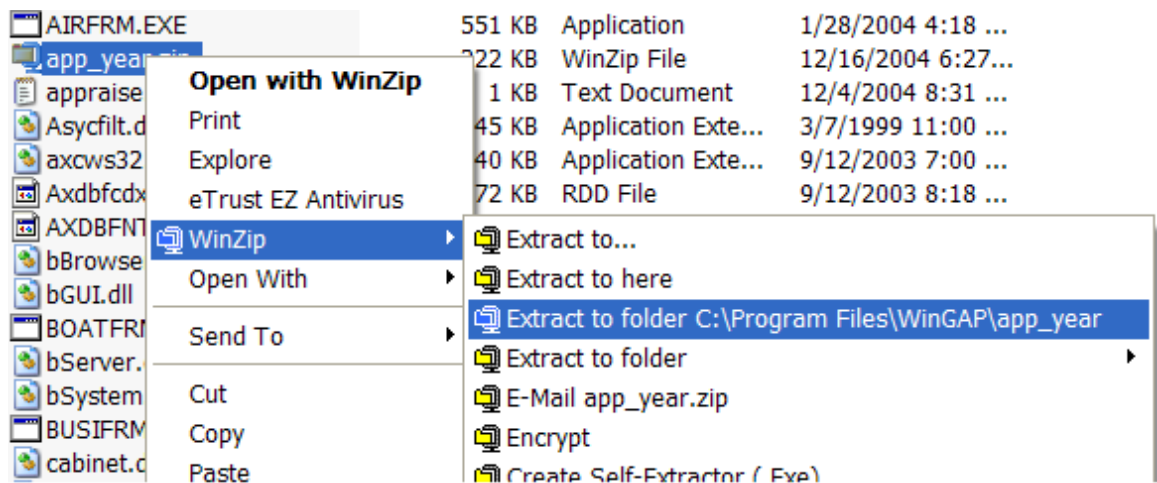

1. Download into your WinGAP application folder the file, wingap.zip. This can be downloaded by going to <http://www.wingap.com/updates.htm> . On the “Download Here:” line, you can left click on the wingap.zip, click on the Save button and download to the WinGAP folder.
2. Download the app_year.zip file from the “Download Here:” line to the WinGAP folder in the same manner as described above for wingap.zip.
3. If you have a folder named app_year in WinGAP, delete the folder before continuing. **Caution: Make sure it is a folder and not the app_year.zip archive which could look like a folder. The zip archive icon will appear as a**

vis or have a zipper down the middle of it. The folder will not display either icon. It will appear as a typical folder.

ALL USERS MUST BE OUT OF WINGAP BEFORE PROCEEDING.

1. Right click on the app_year.zip file
2. Select the WinZip option
3. Select the Extract to folder <drive letter>: \<path to wingap>\app_year option.
A menu such as shown below should appear.

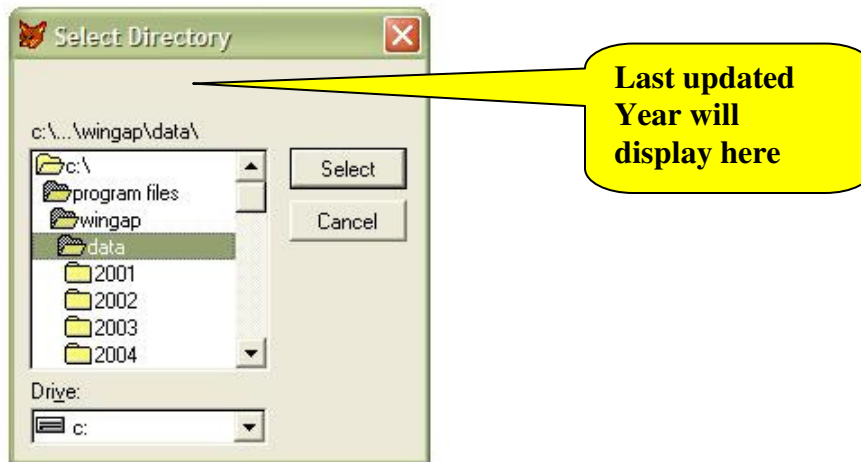

4. The files will be extracted to the folder app_year.
5. Copy strucfix.prg from the app_year folder into the appraisal year folder (2010, 2011, etc.) where you plan to initially run strucfix.
6. run FoxPro
7. change to the appraisal year where you copied strucfix.prg (cd 2011)
8. type: do strucfix

The strucfix procedure will:

1. inform you that you are updating to WinGAP Version 3.12.000
2. if you do not see that prompt, close the update and contact your DOR support agent
3. check for the wingap.zip file in the wingap folder
4. if the file is not present, the update will be stopped
5. if the files are present, the update will proceed as follows
6. the current wingap system files will be copied to a folder named wingap_app_save
7. outdated wingap system files will be deleted
8. new system files will be extracted from wingap.zip
9. “appraisal year” update files will be copied from the ..\wingap\app_year folder
10. data files will be updated

Strucfix will provide the user with the ability to “step through” each appraisal year by selecting the appropriate folder from the directory dialog box (see below) that appears when the strucfix process has concluded in an appraisal year. You should highlight the next appraisal year to be updated (2004, 2003, etc) by clicking on it and then click the **Select** button. **(Please see additional instructions at the end of this document concerning running Strucfix)**

After all appraisal years are updated, click **Cancel** to close strucfix. You should run WinGAP and reindex each appraisal year. When the WinGAP login screen appears, enter the User Id of “**reindex**” (without quotes) and leave the Password blank to access WinGAP and start the re-indexing process. When reindexing is complete, you can login with your usual login and password.

If you are running WinGAP locally against network data, you will need to update your local installations of WinGAP. This can be done by deleting all files in your local WinGAP folder except for the ini files (configuration settings). You can then extract the files from the wingap.zip and wingap_system_v2.zip files into your local wingap folders.

Supplemental Strucfix Instructions

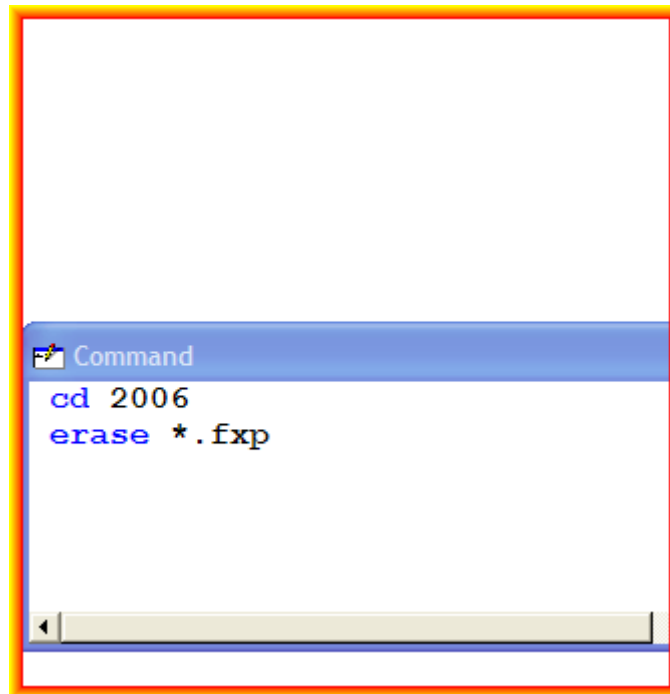

1. Open Visual FoxPro

2. Change Directories into your data year

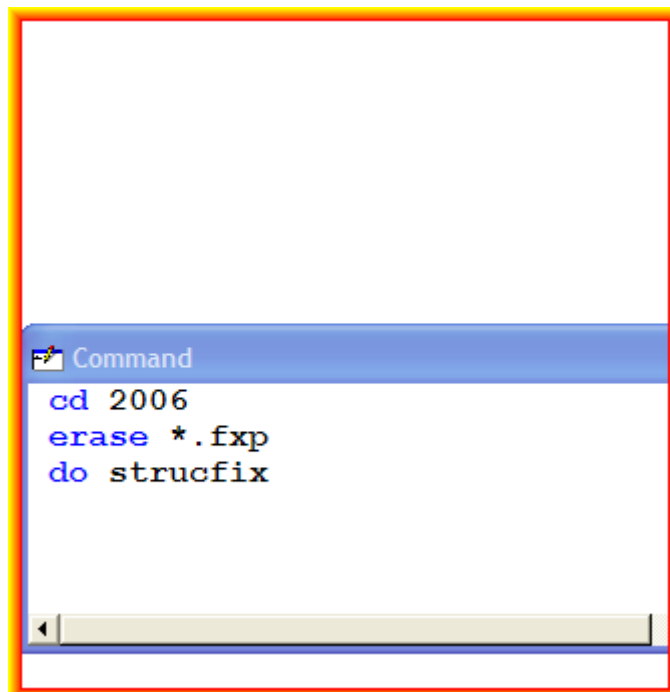

3. erase FXP files (This step is required only when the Strucfix procedure informs you that “**Your Strucfix.fxp file is not updated..**” Extraordinary precaution should be exercised when issuing the **erase** command.)

```
Command
cd 2006
erase *.fxp
```

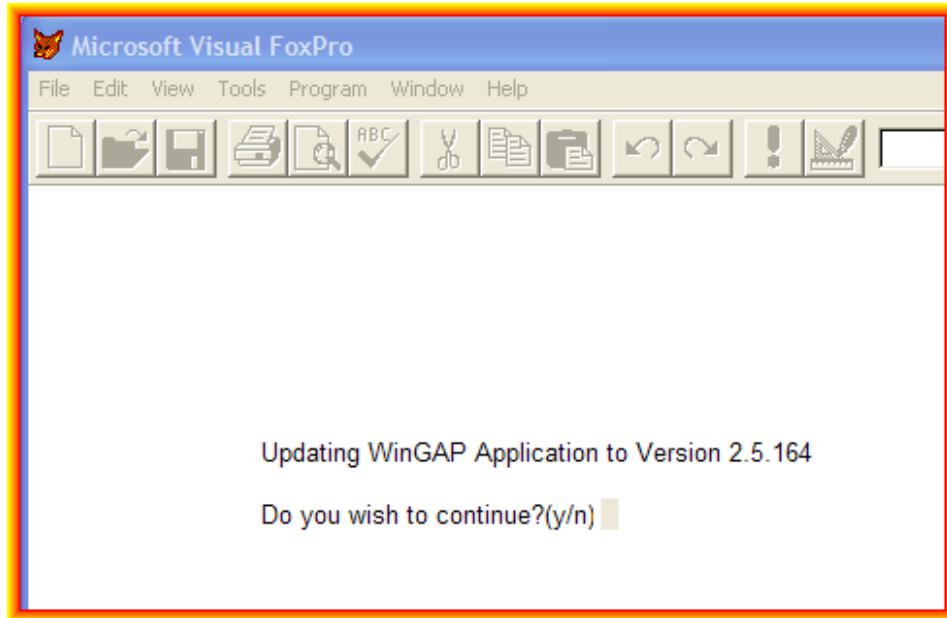

4. Start Strucfix

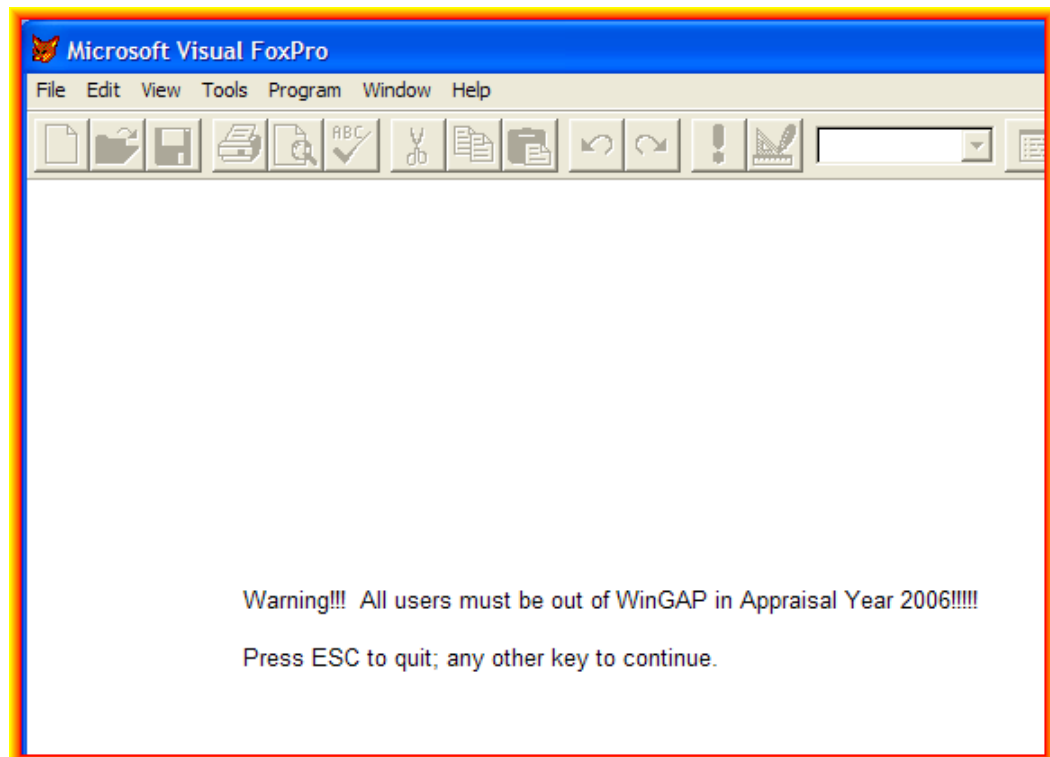

```
Command
cd 2006
erase *.fxp
do strucfix
```

WinGAP Administration

5. Verify the correct version of Strucfix is running (will match the version of WinGAP you are updating to)

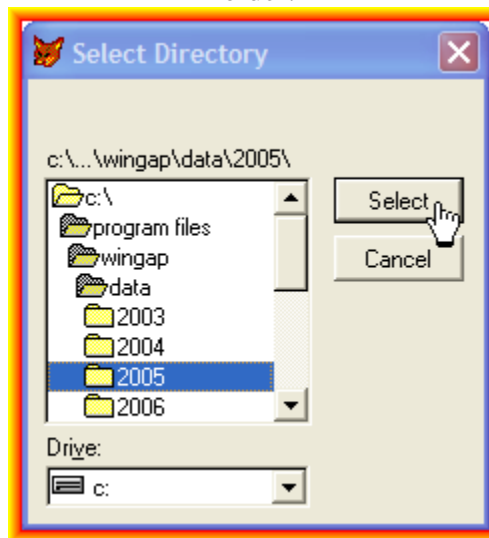

6. If versions match, answer "Y" to continue. If versions do not match, answer "N" to quit.
7. Follow screen prompts

8. When strucfix completes in the first folder, this screen will appear and you should select the next folder you wish to run strucfix in:

9. After selecting the folder, click OK to continue with strucfix in the selected folder.

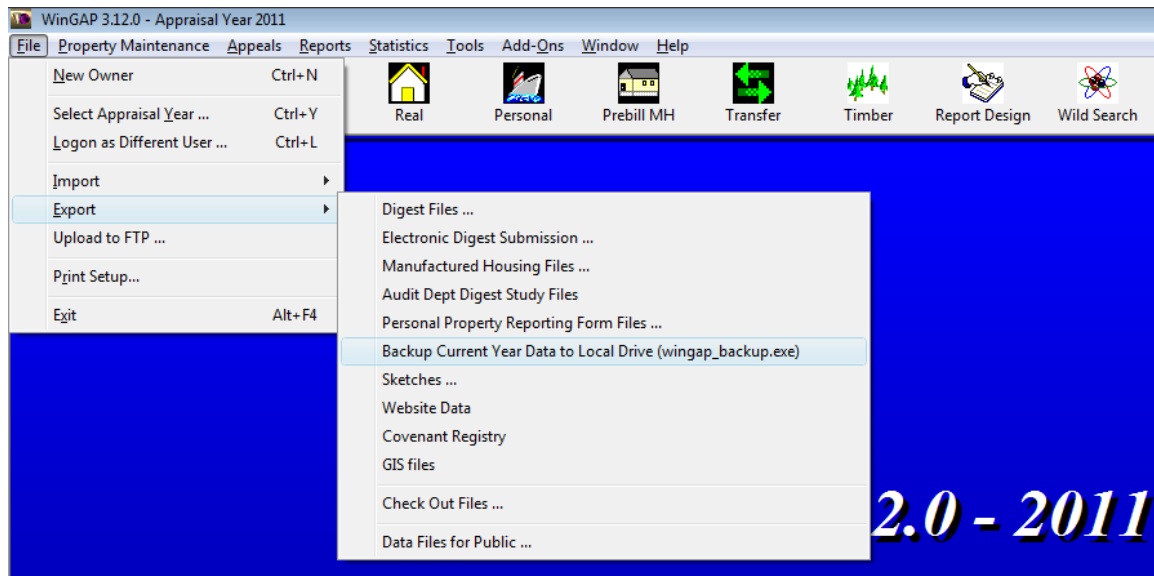

10. Repeat process until all appraisal year folders have been processed.
11. When you have completed all appraisal year folders, please CANCEL off the folder screen.
12. Type QUIT to close Visual FoxPro.
13. Run WinGAP and reindex appraisal years

If you have rolled to 2011 and are updating for the first time to 3.12. you will need to take the additional steps below:

1. In 2011 only, go to Tools >> Schedules/Tables >> Sales Reasons
2. Place a check mark in the Arm's Length Transaction box located on the screen for each sale reason that is an Arm's Length Transaction.
3. Click Apply to save the check mark and move to the next ALT reason to repeat the process.
4. After designating reasons as ALT's, run Data Edits (again, only in 2011).
5. Take the "Select Edits" option
6. Place a Y to the right of the "List SB346 Sales" item
7. Press Enter
8. This will generate a list of ALT sales that should be opened
9. You will then need to provide the proper response to the SB346 Sales prompt that will appear when clicking Apply or OK
10. The editing of the ALT sales will load the Sales Values in their proper fields.

Backup Current Year Data to Local Drive (wingap_backup.exe)

The sixth option on the Export submenu allows the user to backup WinGAP current appraisal year data to another folder, zip the files, and then upload them to the FTP site. This backup process could also be done for a number of other reasons:

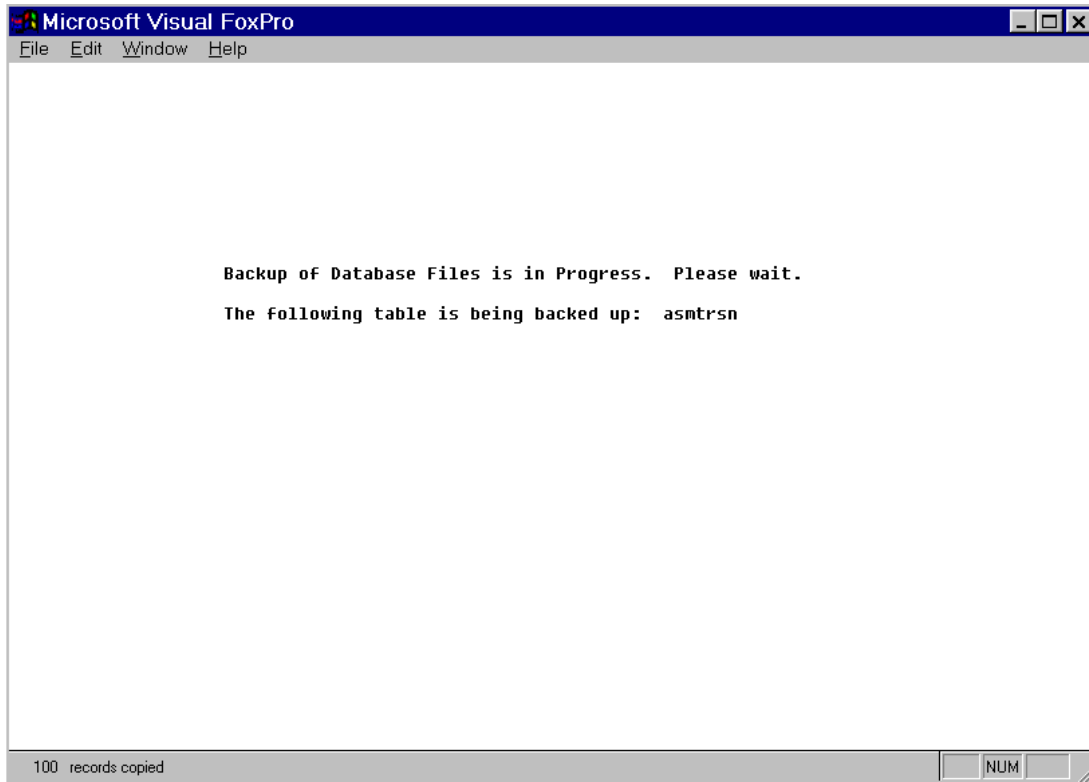

- The user wants to make a backup of the data files prior to Online Support fixing a problem
- The user wants to make a backup of the data before using FoxPro to run some tests on the data
- The user wants to upload data to the WinGAP FTP site for use by a DOR support agent or other purposes

Note: The file, wingap_backup.exe, must be present in the wingap folder and the WinZIP command line exe must be located in C:\program files\winzip before the backup process will function. If an error concerning missing FoxPro libraries is encountered, the NetSetup routine will need to be run on this computer. See the **Tools >> File Maintenance >> Data Edits** section of the manual for instructions on running NetSetup.

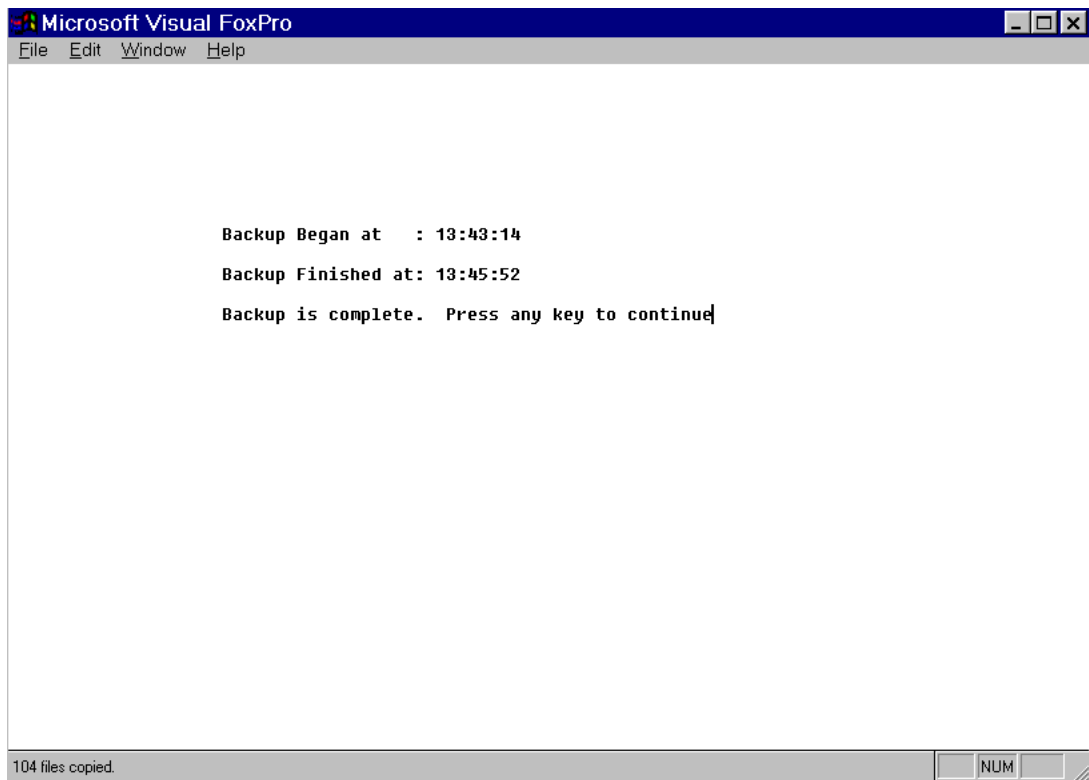

Important: DO NOT use this Backup menu option to transfer files to the public. Confidential data has not been redacted.

Selecting this option on the Export Menu starts the backup process. The process creates a folder called Wingap_Backup, located in the root directory on the users local hard drive. As the Appraisal Year files are copied to this folder, a FoxPro window displays the progress, as seen on the next page.

WinGAP Administration

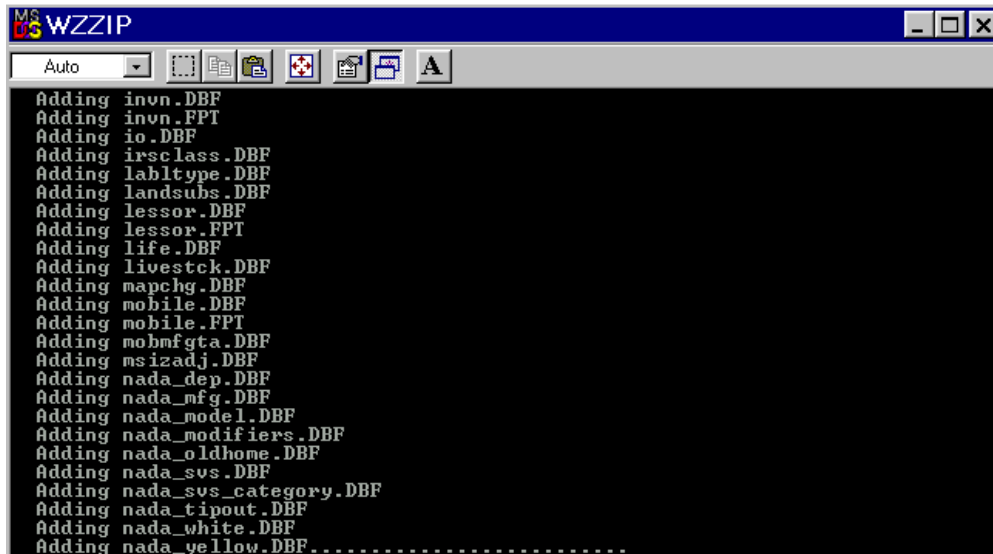

At the conclusion of the Backup process, the FoxPro screen below will display.

WinGAP Administration

Pressing any key on this window starts the Winzip process of zipping the files in this folder.

At the conclusion of the Winzip process, the file wgbackup.zip is created and the Upload Files to FTP window appears, as seen below.

NOTE: If the user does not wish to upload the files, but merely make a backup, the **Cancel** button on the Upload window should be clicked to terminate the upload process. The user should then click the **Begin Upload** button, and the file will be uploaded to that County's folder on the WinGAP FTP site. Various messages will display as the file is uploaded. If the upload is not successful, for instance, the user's Internet connection is not functioning, the user will receive an error message similar to the one below, and the user can try again later to upload the digest files.

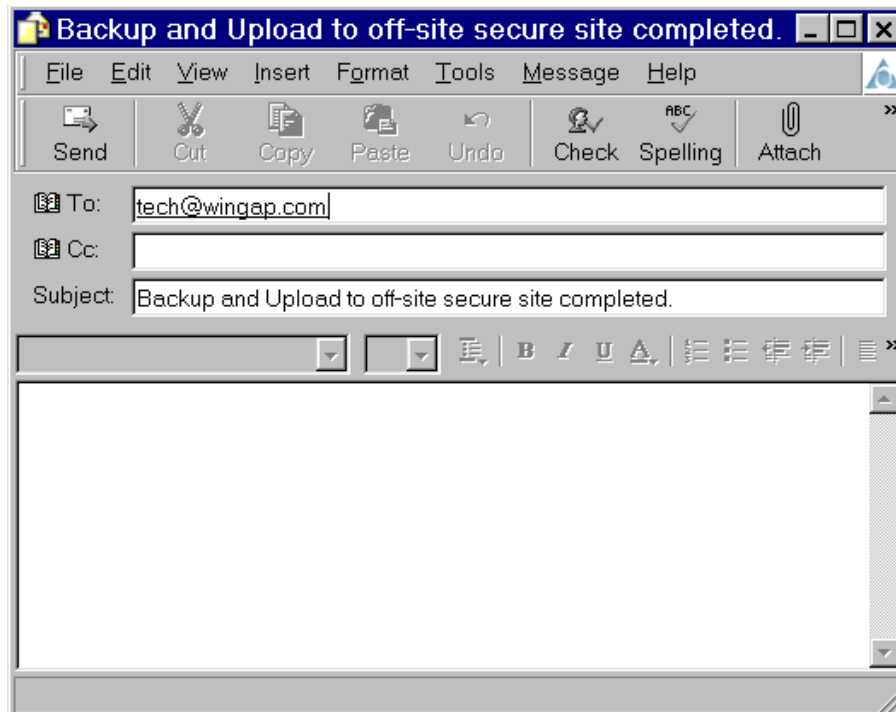

WinGAP Administration

At the conclusion of the upload process the user will be returned to the Upload Files to FTP form. The **Cancel** Button on the Upload Files to FTP form can be clicked to close the Upload window, producing this message.

Clicking Ok on the Wingap Backup Completed message will run the default email client on the user's computer, such as the one below, where an email can be sent to the appropriate party, if desired, about the files that were just uploaded.

DOR Conservation Use Market Data Extraction

In an effort to facilitate the gathering of information for the annual Conservation Use Market Study, a routine has been developed that will extract market information from your WinGAP data and with the FTP Upload function in WinGAP, provide you a means of uploading the data to the ftp site. Parcel data will be extracted for parcels with 25 acres or more with a digest class of Ag, Pref, Conserv Use or Environmentally Sensitive and a FM or LM sale that occurred in 2007 or 2008.

The extraction and uploading to the FTP site should take only a few minutes and does not require that users be out of WinGAP. The routine must be run on a computer that has the WinZip Command Line installed in c:\program files\winzip. The routine will check for the WinZip installation and inform you if the file does not exist.

If you performed the extraction last year, you will already have the routine (dor_cuv.prg) loaded on your system. You can proceed to Step 5 in the instructions below. If you did not perform the extraction last year or you receive a message that the file is not found when you execute Step 7 below, you will need to proceed with the full set of instructions beginning with Step 1.

To download the routine, run the routine and upload the data, follow the steps below:

1. Go to <http://www.wingap.com/catalog.htm/>.
2. Scroll down the page until you find the item “new” WinGAP dor_cuv Extraction Routine.
3. Click on the item and save the dor_cuv.prg into your current appraisal year folder (2009 or 2010). **NOTE:** If a left click opens what appears to be a text file, close the file. Then right click on the item and select the menu option Save Target As.
4. Download the dor_cuv.prg into your current appraisal year folder (2009 or 2010)
5. Run Fox
6. Cd 2009 or cd 2010 (whichever folder is your current appraisal year)
7. Do dor_cuv
8. Follow the prompts
9. Quit
10. Run wingap
11. Run the File >> Upload to Ftp ... menu option

- Click the Browse button at the end of the Select File to Upload field

The Browse Button

- Navigate to the folder inside the appraisal year folder (2009 or 2010).

- Select the folder and click the Open button

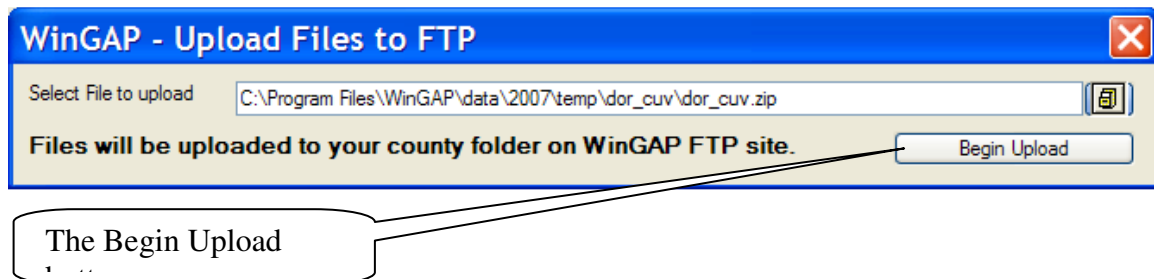

- Select the dor_cuv folder found in the temp folder and click Open

16. Select the dor_cuv.zip file and click the Open button

17. Click the Begin Upload button on the Upload Files to FTP screen

18. The file should be uploaded
19. Email me at rgreese@msn.com with a copy to the other DOR Tech Support agents when the file has been uploaded:

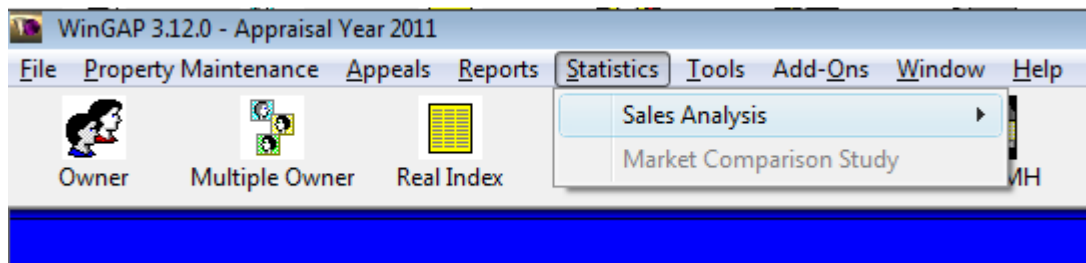

Wayne Blackwelder: wblack@wingap.com
Grant Hilton: hilt1695@bellsouth.net
Tracy Thomas: atthomas@wingap.net
Mark Loyd: mark.loyd@dor.ga.gov
Kenny Colson: kenny.colson@dor.ga.gov

If you encounter any problems or have questions, do not hesitate to use online support or contact one of the DOR Tech Support agents.

It is of utmost importance that we obtain this data as soon as possible. At your earliest convenience, please take a few minutes to perform the above operation. Thank you for your assistance in this matter.

Statistics Module

The Statistics Menu on the WinGAP Menu Bar, seen below, contains two options: 1) Sales Analysis, and 2) Market Comparison Study. Only the Sales Analysis option on the Statistics Menu is functional at the present time. The Sales Analysis option is used to run Sales Ratio Studies. Sales Ratio Studies are designed to assist Assessors' Offices with the analysis of sales. With this tool the appraiser can determine if the valuation of properties within a particular class, neighborhood, building type, tract size, etc. is being performed properly. The appraiser can readily identify if the correct proper assessment level has been established. The degree of uniformity can also be identified along with any valuation bias. These Sales Ratio Studies can provide much needed insight into digest acceptance.

There are three different methods for running Sales Ratio Studies within WinGAP. All three are reached by selecting the Statistics option on the WinGAP Menu Bar, then clicking on the Sales Analysis option. The Sales Analysis sub-menu has three options, Basic Selection, Advanced Query, and Neighborhood Analysis. The Basic Selection option will be covered first.

Basic Selection

Ratio Analysis Criteria Form

The Basic Selection option presents the Ratio Analysis Criteria Form, next page, where the user can select from a variety of pre-defined fields to run the Ratio Study. Each of these fields will be discussed in the order they appear on the Form.

WinGAP - Ratio Analysis Criteria

Sales Criteria

Starting Date: / / ☐ Use Class: ☐ R ☐ C ☐ 1 ☐ 4 ☐ All ☐ FM ☐ LM

Ending Date: / / ☐ A ☐ I ☐ 3 ☐ 5 ☐ FM ☐ LM

State Study: ☐ Reason: Auction, Deed to Secure Debt, Distress Sale, Exempt Property, Fair Market Value

Real Property Criteria

Starting Map: - - - Property Class: Starting Acres: 0.00

Ending Map: - - - Property Strat: Ending Acres: 0.00

Neighborhood: Tax Dist: Subdivision: Land Type: ☐ Urban ☐ Rural

Residential Improvement Criteria

Starting Ending

Grade: 0 0 Exterior Wall:

Grade: 0 0 Used As:

YR Built: 0 0 Built As:

EFYR Built: 0 0

Records Processed: ☐ Selected ☐ True Study

☒ Clip Samples ☐ Use MKTVAL ☒ Use MAV ☐ Use MAV-VAL

Sales Criteria

Ratio Studies can be run based upon a variety of Sales Criteria. The fields in the Sales Criteria section of the Basic Selection Form use the information keyed on the Sales Form when adding sales to Real Property.

- **Starting Date:** The first field in the Sales Criteria section of the Form is where the Starting Date for sales to be used in the Ratio Study is keyed. The date keyed in this field is inclusive. For example, if the user wants a Study of all sales after January 1, 2002, then 01/02/2002 would be keyed in this field. The Starting Date field should be left blank if it is not to be used as a criteria in the Ratio Study.
- **Ending Date:** The next field is where the Ending Date for sales to be used in the Ratio Study is keyed in the same manner as the Starting Date. Like the Starting Date, the date

keyed in the Ending Date field is inclusive. The Ending Date field should be left blank if it is not to be used as a criteria in the Ratio Study.

- **State Study:** The State Study checkbox field should be checked if the Ratio Study is to include only those sales that are marked "Y"(Yes) for State Audit Department use on the Sales Form.
- **Use Class:** Four checkboxes are available where the Sales Classification of the sale can be selected to further qualify the Ratio Study. Any or all of the checkboxes can be selected. If all of the Class checkboxes are left blank, the Sales Class will be ignored in the selection of sales.
- **Use Strat:** Four checkboxes are available where the Sales Stratification of the sale can be selected to further qualify the Ratio Study. Any or all of the checkboxes can be selected. If all of the Strat checkboxes are left blank, the Sales Strat will be ignored in the selection of sales.
- **Reason:** Three checkboxes and a combo box are available to set criteria for the Sale Reasons to be used for the Ratio Study. If the **All** checkbox is checked, and the combo box left blank, all Sales will be used, regardless of Sale Reason, provided the sales meet the other criteria already keyed in the fields on the Ratio Analysis Criteria Form. If only the **FM** (Fair Market) checkbox is checked, and the combo box left blank, only sales with a Sales Reason of Fair Market will be used. If only the **LM** (Land Market) checkbox is checked, and the combo box left blank, only sales with a Sales Reason of Land Market will be used. If both the FM and LM checkboxes are checked, and the combo box left blank, only sales with a Sales Reason of Fair Market or Land Market will be used. The FM and/or LM checkboxes also be used with any of the Sale Reasons in the combo box to run a Ratio Study. Finally, the FM and LM checkboxes can be left blank and a specific reason in the Sales Reason combo box can be used to run a Ratio Study for a specific type of Sale Reason.

Real Property Criteria

The criteria used to run a Ratio Study can be further narrowed by using a variety of Real Property Criteria. The fields in the Real Property Criteria section of the Ratio Analysis Criteria Form use information keyed on the Real Property General Information Form.

- **Starting Map:** The first field in the Real Property Criteria section of the Form is where a Starting Map/Parcel number for the Ratio Study, if desired, can be keyed. The Map number keyed in this field is inclusive. The Starting Map field should be left blank if it is not to be used as a criteria in the Ratio Study.
- **Ending Map:** The next field is where the Ending Map for sales to be used in the Ratio Study is keyed in the same manner as the Starting Map number. Like the Starting Map number, the Map/Parcel number keyed in the Ending Date field is inclusive. The Ending Map field should be left blank if it is not to be used as a criteria in the Ratio Study.
- **Property Class:** The Property Class combo box can be used to select a specific Digest Classification for the Ratio Study. If all sales regardless of Digest Classification are desired in the Study, the field should be left blank.

- **Property Strat:** The Property Strat combo box can be used to select a specific Digest Stratification for the Ratio Study. If all sales regardless of Digest Stratification are desired in the Study, the field should be left blank.
- **Starting Acres:** A specific minimum size for the sales used in the Ratio Study can be selected by keying a Starting Acre level in this field. The field should be left blank to include all sales regardless of tract size.
- **Ending Acres:** A specific maximum size for the sales used in the Ratio Study can be selected by keying an Ending Acre level in this field. The field should be left blank to include all sales regardless of tract size.
- **Starting Neighborhood/Tax District/Subdivision:** The Ratio Study can be further qualified if desired by using these combo boxes to select a specific Starting Neighborhood, Tax District, or Subdivision. These fields should be left blank to include all sales regardless of the Starting Neighborhood, Tax District, or Subdivision.
- **Ending Neighborhood/Tax District/Subdivision:** The Ratio Study can be further qualified if desired by using these combo boxes to select a specific Ending Neighborhood, Tax District, or Subdivision. These fields should be left blank to include all sales regardless of the Ending Neighborhood, Tax District, or Subdivision.
- **Urban / Rural:** These two checkboxes are used to designate what Land Type, if any, should be included in the Ratio Study. If neither of these boxes are checked, all Land Types will be included in the study.

Residential Improvement Criteria

The criteria for Ratio Studies that include Residential Improvements can be further narrowed by using a variety of Residential Improvement Criteria. The fields in the Residential Improvement Criteria section of the Ratio Analysis Criteria Form use information keyed on the Residential Improvements Form.

- **Grade:** The first two fields in the Residential Improvement Criteria section of the Form are where a Starting and Ending Grade for Residential Improvements can be keyed. Any Grade keyed in these fields is inclusive. The Grade fields should be left blank if they are not to be used as criteria in the Ratio Study.
- **YR Built:** The YR Built fields are where a Starting and Ending Year Built for Residential improvements can be keyed. Any Year Built keyed in these fields is inclusive. The Year Built fields should be left blank if they are not to be used as a criteria in the Ratio Study.
- **EFYR Built:** The EFYR Built fields are where a Starting and Ending Effective Year Built for Residential Improvements can be keyed. Any Effective Year Built keyed in these fields is inclusive. The Effective Year Built fields should be left blank if they are not to be used as criteria in the Ratio Study.
- **Heated Area:** The Heated Area fields in the Residential Improvement Criteria section of the Form are where a Starting and Ending Heated Area for improvements can be keyed. Any Heated Area keyed in these fields is inclusive. The Heated Area fields should be left blank if they are not to be used as criteria in the Ratio Study.

- **Exterior Wall:** The Exterior Wall combo box can be used to select a specific type of Residential Improvement Exterior Wall for a Ratio Study. The Exterior Wall field should be left blank if it is not to be used as a criteria in the Ratio Study.
- **Occupancy:** The Occupancy combo box can be used to select a specific type of Residential Improvement Occupancy for a Ratio Study. The Occupancy field should be left blank if it is not to be used as a criteria in the Ratio Study.
- **Observed Condition:** The Observed Condition combo box can be used to select a specific type of Residential Improvement Observed Condition for a Ratio Study. The Observed Condition field should be left blank if it is not to be used as a criteria in the Ratio Study.

Commercial Improvement Criteria

The criteria for Ratio Studies that include Commercial Improvements can be further narrowed by using a variety of Commercial Improvement Criteria. The fields in the Commercial Improvement Criteria section of the Ratio Analysis Criteria Form use the information keyed on the Commercial Improvements Form.

- **Grade:** The first two fields in the Commercial Improvement Criteria section of the Form are where a Starting and Ending Grade for Commercial Improvements can be keyed. Any Grade keyed in these fields is inclusive. The Grade fields should be left blank if they are not to be used as criteria in the Ratio Study.
- **YR Built:** The YR Built fields are where a Starting and Ending Year Built for Commercial Improvements can be keyed. Any Year Built keyed in these fields is inclusive. The Year Built fields should be left blank if they are not to be used as criteria in the Ratio Study.
- **EFYR Built:** The EFYR Built fields are where a Starting and Ending Effective Year Built for Commercial Improvements can be keyed. Any Effective Year Built keyed in these fields is inclusive. The Effective Year Built fields should be left blank if they are not to be used as criteria in the Ratio Study.
- **Used As:** The Used As combo box can be used to select a specific type of Commercial Improvements Used As Code for a Ratio Study. The Used As field should be left blank if it is not to be used as a criteria in the Ratio Study.
- **Built As:** The Built As combo box can be used to select a specific type of Commercial Improvements Built As Code for a Ratio Study. The Built As field should be left blank if it is not to be used as a criteria in the Ratio Study.

After reviewing/changing any of the selection criteria for the Ratio Study, the **OK** button MUST be clicked to perform the Study. A horizontal yellow bar, followed by a red bar, will appear as WinGAP analyses sales based upon the selection criteria and calculates the sales ratios and other statistics that make up the Ratio Study. The number of Sales records that are processed (all Sales records) and selected (those that meet the criteria keyed on the Ratio Analysis Criteria Form) in the Ratio Study will display beneath the bar graphs. When this process is completed, WinGAP will produce the Sales Ratio Analysis Form, discussed below. If no sales are found that meet the selection criteria, WinGAP will

display the message "No records found - please expand your search", and the user should expand the sales criteria in order to locate the desired sales.

Buttons and Checkboxes

The **OK** button on the Ratio Analysis Criteria Form is clicked to run the Ratio Study. The **Cancel** or **Exit** buttons can be clicked to leave the Form. The **Print Screen** Button can be clicked to print a hard copy of the Form showing the selected selection criteria, which can be attached to the printout of the Ratio Study (covered next).

The **Clip Samples** checkbox at the bottom of the Form allows the user to exclude or include sales with sales ratios outside the acceptable range of .10 to .70. If the Clip Samples checkbox is checked (the default), only sales with sales ratios between .10 and .70 will be included. If the Clip Samples checkbox is not checked, all sales, regardless of ratio, will be included.

The **Use MAV** checkbox is provided to allow the appraiser to use the MAV (Moratorium Appraised Value) in the calculation of the sales-assessment ratio. The box is checked as the default. If the box is not checked, the FMV (Fair Market Value) will be used.

The **Use MKTVAL** checkbox is provided to allow the appraiser to define whether the FMV entry on the Sales Information Form should be used instead of the parcel's current value in determining the ratio. If the Use MKTVAL checkbox is checked and the FMV field on the Sales Information Form is greater than zero, the FMV value will be used for the ratio calculation.

The **True Study** checkbox is provided to allow the appraiser to run a Ratio Study on FMV or MAV values rather than SB 346 values. This field is not functional in the current version of WinGAP.

Sales Ratio Analysis Form

Once the sales are analyzed and the sales ratios calculated, the Sales Ratio Analysis Form will appear, similar to the one on the next page, superimposed over the Ratio Analysis Criteria Form. The Sales Ratio Analysis Form will display the sales ratios and other statistics and present the user with several options for printing the Ratio Study. The user can also look at a list of the sales that met the selection criteria and edit these sales if needed. Each of the fields and options of the Sales Ratio Analysis Form will be discussed in the order they appear on the Form.

The screenshot shows the 'WinGAP - Sales Ratio Analysis' window. It contains several input fields and a table of results. The 'Print Options' section has radio buttons for 'Summary' and 'Details', and a 'Print Order' section with radio buttons for 'Ratio', 'Acre', 'Parcel', 'Neighborhood', 'Grantor', 'Grantee', 'Sale Class', and 'Sale Date'. There is also a checkbox for 'Detailed Report' and a 'Print' button. At the bottom, there is a 'Report Title' field with the text 'Sales Ratio Analysis' and an 'Exit' button.

	LCI	Actual	UCI
Median	0.3806	0.3918	0.4002
Aggregate	0.3788	0.3849	0.3910
COD	0.0982		
PRD	1.0027		
Number of Samples	223		
Lowest Ratio	0.2710		
Highest Ratio	0.4912		
Min Sample Size	3		
Standard Deviation	0.0918		

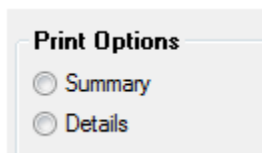

Buttons: View Array, 100%, Print, Exit

- Median LCI/Actual/UCI:** The Median Actual Ratio is a measure of central tendency that indicates the midpoint of the array of the sales ratios. The Median Ratio is the statistic used to determine the level of assessment for the study. If the Median Ratio exceeds .44, the UCI (Upper Confidence Interval) Ratio can be used to see if digest acceptance is possible. The Upper Confidence Interval must be between .36 and .44 in this situation. The LCI (Lower Confidence Interval) is used in the same manner as the Upper Confidence Interval, except it will be used to determine digest acceptance if the Median Ratio is less than .36.
- Aggregate LCI/Actual/UCI:** The Aggregate Actual Ratio is the weighted average of the sales. It is calculated by dividing the sum of the assessments by the sum of the sales prices. If the PRD (Price Related Differential, explained below) is outside of acceptable ranges and the Aggregate Ratio is used to determine the assessment level, the UCI (Upper Confidence Interval) Ratio must fall within a ratio range of .36 to .44 to allow for assessment level acceptance. If the PRD is out of range, the LCI (Lower Confidence Interval) is used in the same manner as the Upper Confidence Interval meaning that if the UCI is out of range, the LCI must fall within the acceptable range of .36 to .44 for assessment level acceptance. The table below provides an illustration of the use of the UCI and LCI.

LCI	AGG	UCI	
32	34	36	Pass (UCI falls within (overlaps) acceptable range)
28	30	32	Fails
26	32	38	Pass (UCI falls within (overlaps) acceptable range)

- **COD:** The COD, or Coefficient of Dispersion, measures the degree of uniformity in the study. The COD is calculated by first determining the absolute deviation from the median for each sale (Ratio-Median). The average of the deviations is then calculated. The average deviation is then divided by the median ratio to produce the COD. The COD should be less than .15 for residential property and less than .20 for agricultural, commercial, and industrial properties.
- **PRD:** The PRD, or Price Related Differential, is used to measure assessment bias in a ratio study. The PRD should fall between .95 and 1.10. It is calculated by dividing the mean ratio by the aggregate ratio. If the PRD is greater than 1.00, the lower priced properties generally have higher ratios than the higher priced properties. The study is exhibiting regressivity. If the PRD is less than 1.00, the higher priced properties are overvalued compared to the lower priced properties. The study exhibits progressivity
- **Number of Samples:** The number of Sales that met the selection criteria and are used in the Ratio Study.
- **Lowest Ratio:** The Lowest Ratio of any sale that meets the selection criteria and is used in the Ratio Study.
- **Highest Ratio:** The Highest Ratio of any sale that meets the selection criteria and is used in the Ratio Study.
- **Min Sample Size:** The smallest number of samples in a ratio study that will constitute a valid ratio study. The Min Sample Size is a function of the uniformity in the ratio study. A ratio study with greater uniformity has a lower Min Sample Size.
- **Standard Deviation:** The basic numeric measure of the extent of variation of the sample around the center (measure of central tendency).
- **Report Title:** The title of the Sales Ratio Report can be customized by using this 50 character field. The default is Sales Ratio Analysis.

Print Options

A screenshot of a 'Print Options' dialog box. It has a title bar that says 'Print Options'. Inside, there are two radio buttons. The first one is labeled 'Summary' and is selected. The second one is labeled 'Details' and is not selected.

The Sales Ratio Study is printed by selecting one of the options in the Print Options radio button section of the Sales Ratio Analysis Form. A Summary report of only the Sales Ratios statistics, with no individual sales, can be printed by clicking the **Summary** radio button, then the **Print** button. This will send a screen image of the Sales Ratio Analysis Form to the default Windows printer. If a detailed listing of the sales that make up the Sales Ratio Study is desired, the Detailed radio button should be clicked, which will provide access to the Print Order section of the Form.

Print Order

Print Order

☐ Ratio

☐ Acre

☐ Parcel

☐ Neighborhood

☐ Grantor

☐ Grantee

☐ Sale Class

☐ Sale Date

☐ Detailed Report

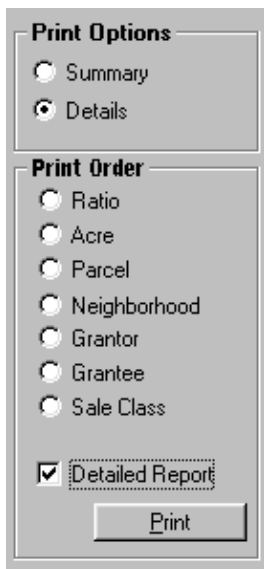

If the Details radio button in the Print Options section of the Form is clicked, the user can choose from seven available orders in which the Detailed Sales Ratio report can be printed, as shown above. These are Ratio, Acre, Parcel Number, Neighborhood, Grantor, Grantee, and Sale Class order. One of these must be selected, and then the Print button should be clicked. This will produce a Print Preview of the detailed report, as shown below.

The Preview can be enlarged by putting the mouse pointer on the report and clicking with the left mouse button, and reduced in size by clicking the right mouse button. All of the sales that make up the Sales Ratio Study will be displayed. If the report is more than one page, the >> button at the top of the Preview page can be clicked to view additional pages. The last page will also show all of the Sales Ratios for the report. The report can be printed by clicking the printer button at the upper left of the Preview page. Once the report prints, the Preview page will disappear and the user will be returned to the Sales Ratio Analysis Form.

Detailed Report Checkbox

The image shows a 'Print Options' dialog box. It has two sections: 'Print Options' and 'Print Order'. In the 'Print Options' section, there are two radio buttons: 'Summary' and 'Details', with 'Details' selected. In the 'Print Order' section, there are seven radio buttons: 'Ratio', 'Acre', 'Parcel', 'Neighborhood', 'Grantor', 'Grantee', and 'Sale Class'. Below these is a checkbox labeled 'Detailed Report' which is checked. At the bottom of the dialog is a 'Print' button.

Additional information about the property for each sale can be obtained by clicking in the Detailed Report checkbox, above, prior to printing the Detailed Sales Ratio report. A print preview will display, next page, showing this additional information, such as the Residential Improvement, Accessory Improvements, etc., for each sale.

Report Title: Sales Ratio Analysis

Exit

A listing of all sales that meet the selection criteria can be viewed, as shown below, by clicking the **View Array** Button, above, on the Sales Ratio Analysis Form. All of the information about each sale that met the selection criteria will display in the default sales ratio order on the Sales Array list box, as shown below.

A sale can be edited by clicking on the desired sale and then clicking the **Edit Sale** button. The sales array can also be opened as an Excel spreadsheet by clicking the **Open with Excel** button. The spreadsheet can be saved to another file name and manipulated by the user. The **OK** button should be clicked to leave the listing of sales and return to the Sales Ratio Analysis Form.

100% Button

The ratio statistics that are displayed on the default Sales Ratio Analysis Form are based upon the 40% level of assessment. If the user wants to view these statistics at the 100% Fair Market Value of the property, the **100% Button** should be clicked. The 100% Button will change to 40%. The 40% Button can be clicked to again display the ratios at the 40% assessment level.

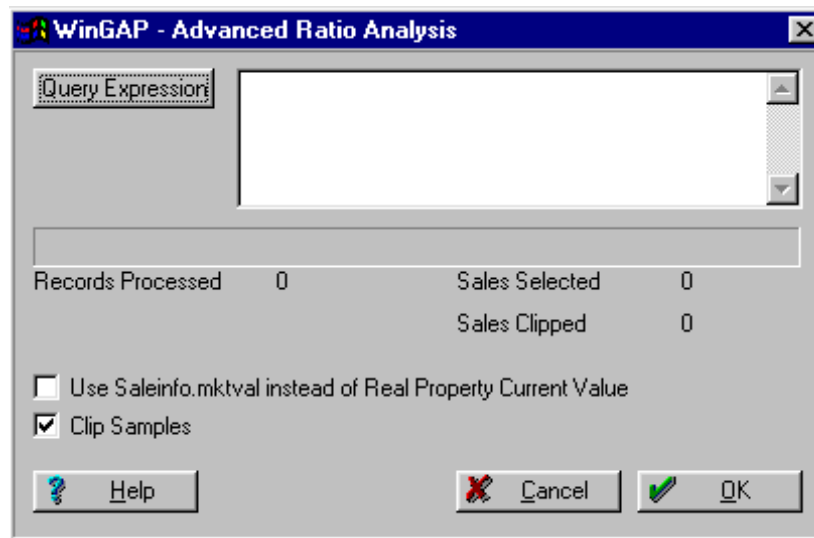

Once the work with this ratio study is completed, the OK button on the Sales Ratio Analysis Form should be clicked to return to the Ratio Analysis Criteria Form. Once all Basic Selection ratio study work is completed, the Exit button on the Ratio Analysis Criteria Form should be clicked to return to the main WinGAP screen.

Advanced Query

The Advanced Query option on the Sales Analysis Menu, below, provides a more flexible tool that the Assessors' Office can utilize in the generation of customized ratio studies. The Advanced Query will allow the Assessors' Office to incorporate any criteria that can be used in the analysis of sales into the sales analysis process.

Selecting this option presents the Advanced Ratio Analysis Form, below. This Form and the Expression Builder Form, explained later, will be used to construct what is called a Query Expression. The contents of the Query Expression will determine the manner in which the Sales Ratio Study will be run.

The image shows the 'WinGAP - Advanced Ratio Analysis' dialog box. It has a title bar with the WinGAP logo and the text 'WinGAP - Advanced Ratio Analysis'. Inside the dialog, there is a 'Query Expression' label next to a large text area. Below this is a progress bar. Under the progress bar, there are four status fields: 'Records Processed' with a value of 0, 'Sales Selected' with a value of 0, and 'Sales Clipped' with a value of 0. There are two checkboxes: 'Use Saleinfo.mktval instead of Real Property Current Value' (unchecked) and 'Clip Samples' (checked). At the bottom, there are three buttons: 'Help' (with a question mark icon), 'Cancel' (with a red X icon), and 'OK' (with a green checkmark icon).

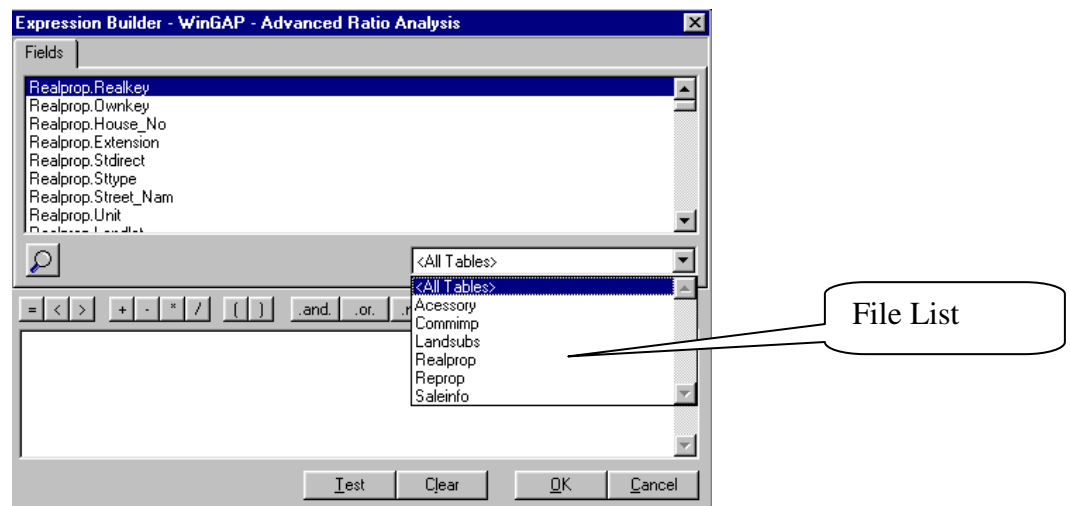

The Query Expression is constructed using at least one of six WinGAP database files, at least one of the data fields in one of the files, and at least one operator (explained below). Multiple files, fields, and operators can be used to construct more complex Query Expressions and produce more defined Sales Ratio Studies. All ratio studies use the Saleinfo database file, regardless of whether it is contained in the query or not, as it contains all of the sales applicable to a particular parcel. Most queries will link the Saleinfo file with at least one of the other five database files to qualify and further narrow the criteria for the ratio study.

In order to run ratio studies properly the user should have a basic understanding of the following:

1. what the purpose is of each of the six files used in running a Sales Ratio Study
2. what kind of data is contained in the fields found in each of the six files
3. which operators should be used to construct the query statement

A. The Six Sales Ratio Analysis Database Files

As seen below on the Expression Builder Form, six WinGAP Database files are used to run Sales Ratio Studies. The user can click on the combo box in the center of the Form to display the file list. These files are explained in detail below.

1. SALEINFO.DBF

SALEINFO.DBF is the primary database file used in running ratios and contains sales information pertaining to parcels that are entered into WinGAP. Data such as grantee, grantor, deed book and page, saleprice, sale class, sale strata, and sale reason code are contained in this file.

2. ACESSORY.DBF

All of the data about every accessory building in the county is contained in the ACESSORY.DBF file. Such information as length, width, square feet, grade, and accessory improvement value is stored here.

3. COMMIMP.DBF

The primary commercial improvement database, COMMIMP.DBF contains data for each commercial improvement such as digest class and strat, used as and built as codes, square footage, and total commercial improvement value.

4. LANDSUBS.DBF

Landsubs.dbf contains the land subrecords for all types of urban and rural land in WinGAP. Subrecord data such as front feet, acres, land type, subrecord influence, and subdivision code are contained in this file.

5. REALPROP.DBF

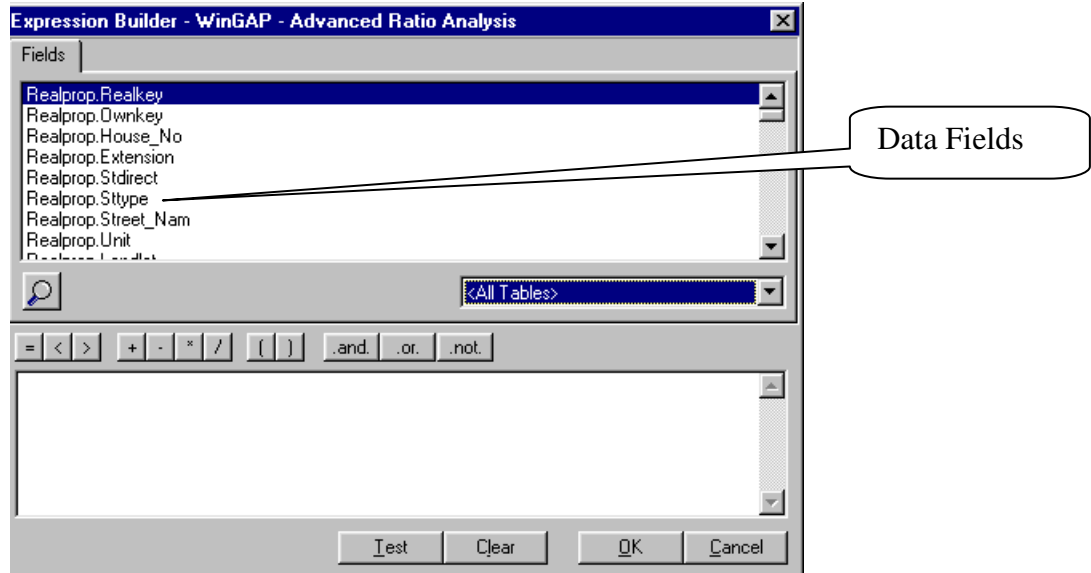

Every parcel entered in WinGAP will have a record in this file. This file contains the parcel number, total current and previous parcel value, digest classification and stratification, and taxing district, etc.

6. REPROP.DBF

The primary residential improvement database file, REPROP.DBF contains information such as exterior wall type, square feet, total heated area, grade, heating type, plumbing, and total improvement value.

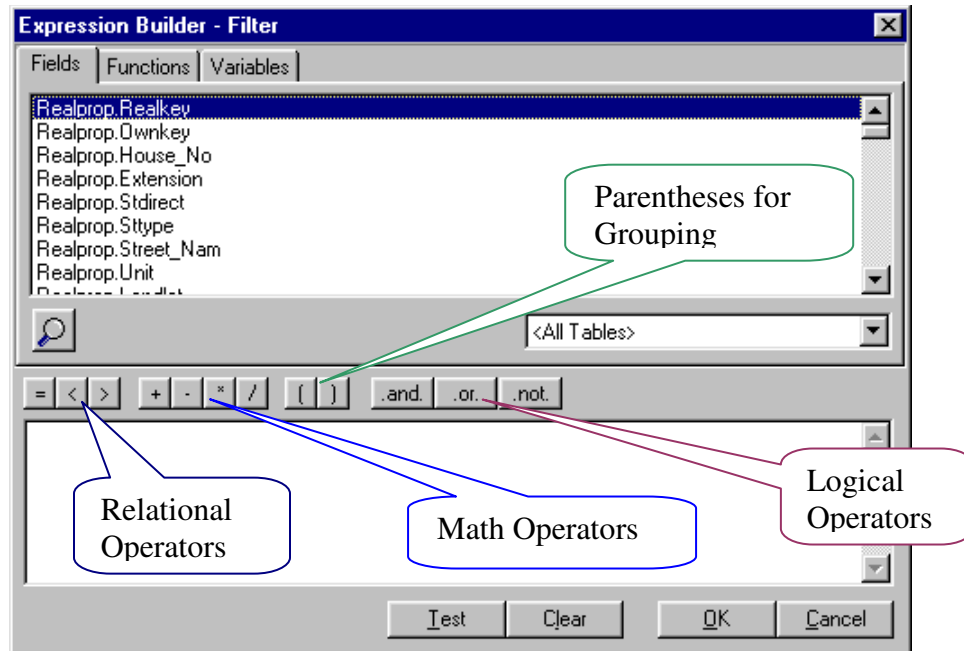

B. Data Fields

Each of the six database files used to run Sales Ratio Studies have a number of fields that contain specific kinds of data that can be used to qualify the Query Expression. The number, type, and purpose of each field varies from file to file. For instance, REALPROP.DBF would be used if the ratio study used parcel acreage as a qualifier; LANDSUBS.DBF would be used if land type was needed as a qualifier. REPROP.DBF would be used if grade or structure value for residential buildings was a qualifier; COMMIMP.DBF would be used if grade or structure value for commercial buildings was needed. On the Expression Builder Form, as seen on the next page, the field names are displayed in the top window on the Form, to the right of the file name, separated by a period.

C. Operators

Operators, as shown on the Expression Builder Form, next page, are used to compare field values in database files with qualifying data **and** to link multiple expressions. Three types of operators are used in the Analysis module. **Relational** operators such as = (equal to), > (greater than), < (less than), and <> (not equal to) are used to compare a field value with the qualifying data. **Mathematical** operators such as + (plus), - (minus), * (multiply), and / (divide) are used to perform mathematical operations. When data in one file or more than one file is combined in a query statement they are linked by a **Logical** operator. The two logical operators are **AND** and **OR**. **AND** is used to join two or more logical expressions and generate a single result. For the result to be true, each of the logical expressions must be true. **OR** also joins two or more logical expressions, but only one of these must be true in order to obtain a single result. Also, parentheses are sometimes used to "group" expressions or parts of an expression.

As mentioned earlier, clicking on the **Statistics >> Sales Analysis >> Advanced Query** menu option produces the Advanced Ratio Analysis Form, below.

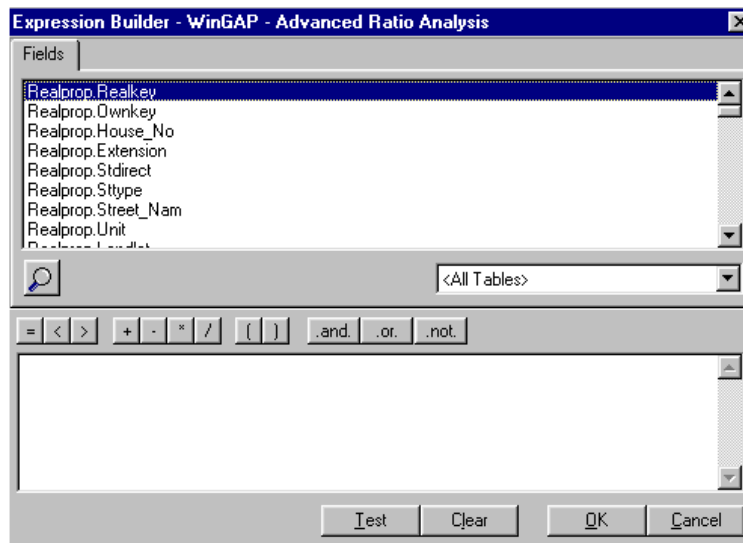

The Form contains a window in which the finished Query Expression will be displayed after it is constructed. Two checkboxes on the lower left of the Form allow the user to further define how the Sales Ratio Study is run. Placing a checkmark in the **Use Saleinfo.mktval instead of Real Property Current Value** checkbox allows the use of the Fair Market Value as entered on the Sales Information Form instead of the Current Value as calculated by WinGAP. The **Clip Samples** checkbox, which is checked by default, allows the exclusion of sales with ratios outside of a range of .10 to .70. Removing the checkmark means that all sales that meet the Query Expression conditions will be used, regardless of ratio.

When the user clicks on the **OK** Button, a bar graph will appear in the center of the form and the number of Records (parcels) Processed, the number of Sales Selected for the ratio study, and the number of Sales Clipped, or excluded, will be displayed, prior to the user being taken to the Sales Ratio Analysis Form. Before clicking the OK button, however, the user must first construct a Query Expression.

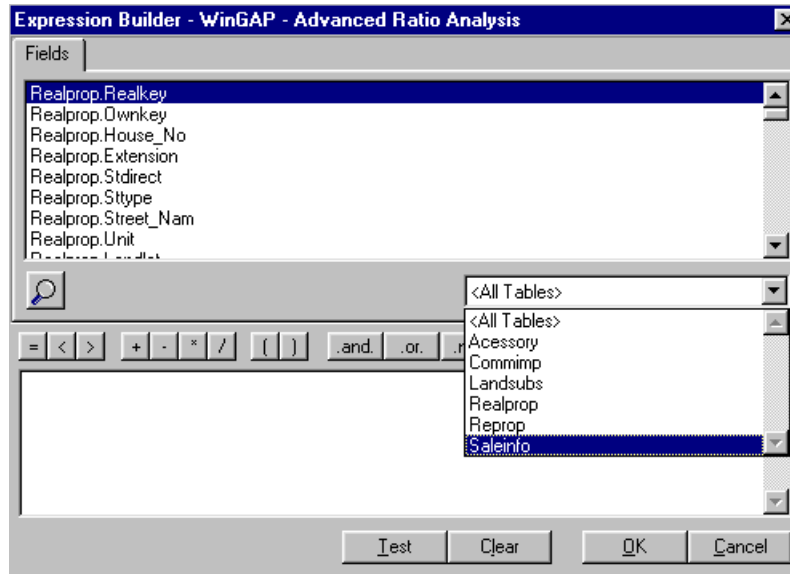

The instructions on the following pages will show the user how to construct several Query Expressions that can be used in the Assessors Office to analyze sales. A simple query will be looked at first, followed by more complex ones. The Advanced Query screens as they appear in WinGAP as the user builds the Query Expression will be shown for each example.

Example One: A study of all Residential Sales

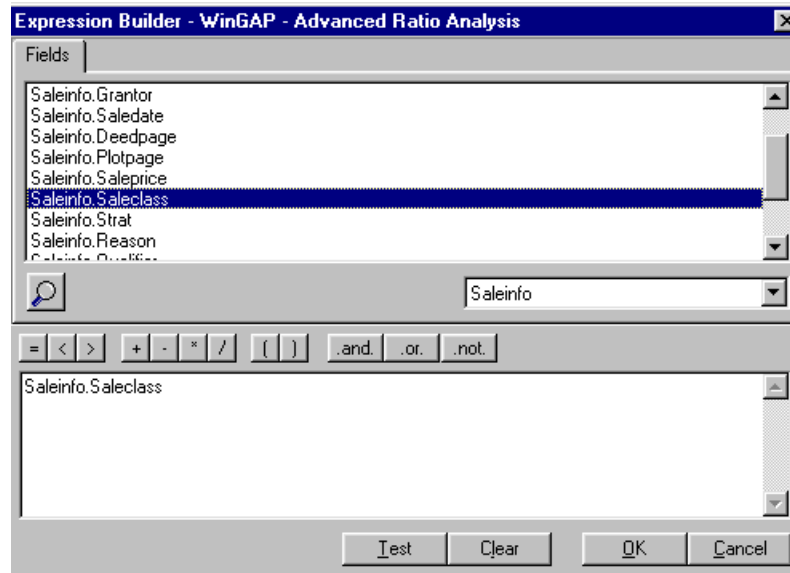

As mentioned earlier, the first step in running a Sales Ratio Study using the Advanced Query method is to build the Query Expression. To construct the Query Expression, the user must click the Query Expression Button on the top left of the Advanced Ratio Analysis Form, which produces the Expression Builder Form, below. **NOTE:** The speed of the Advanced Query is enhanced if Saleinfo is the first file chosen for selection criteria.

The top window of the Expression Builder Form contains the file and field names of the six WinGAP databases that are used in running sales ratios. Since the file/field listing can be somewhat long when all six files are displayed, the user can limit the list to one file by clicking on the <All Tables> combo box, next page, and selecting the desired file, which in this example is Saleinfo.

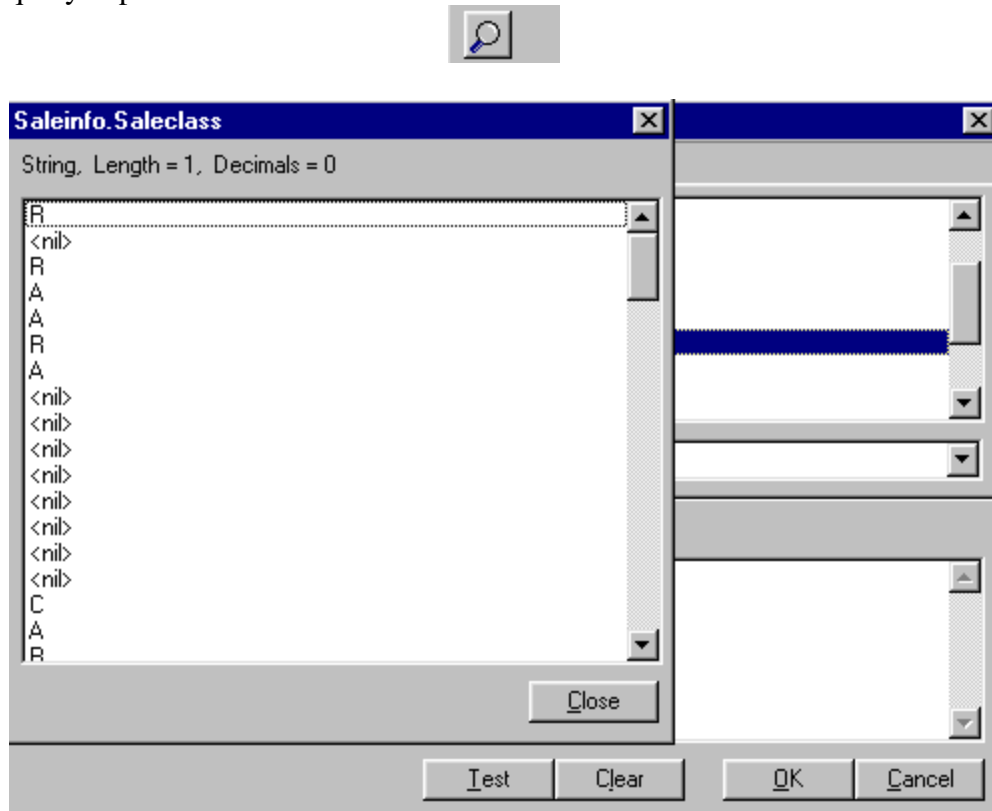

The Saleinfo database file is used in this example because the ratio study called for only Residential Sales, and the sales classification is contained in the Saleclass field within the Saleinfo database file. So the user should select the Saleinfo file in the combo box, and then double click on the Saleinfo.saleclass field in the top window of the Form to select this file and field and place it in the bottom window of the Expression Builder Form, as shown below.

Once the File and field appear in the bottom window of the Expression Builder Form, the condition(s) for the ratio study are set. The condition in this example is for all Residential sales. The user should click the "=" button, then key an "R" (R is the Sales Classification for Residential Sales) to the right of the equal sign to set the condition. The " " are called delimiters and are used with character (also called "String") fields. When the user is not sure of the data type characteristics of the field they are about to use, the magnifying

glass button, below, which is located to the left and below the top window on the Form, can be clicked to display additional information about the field, in this case for the Saleinfo.Saleclass field, as seen below. The additional information indicates the Saleclass field is a string (character) field with a width of 1 (one), and also shows that the character data is in capital letters, such as R, A, or C, meaning that it has to be keyed in this manner in the query expression.

Once the Query Expression is built, it will appear on the Expression Builder Form as seen on the next page.

The Test Button should be clicked to "test" the Query Expression. If the Query Expression is valid, the OK button on the Expression Builder Form is clicked to return to the Advanced Ratio Analysis Form, as seen below. If the user receives an error message after clicking the Test Button, the Query Expression must be corrected and again tested before leaving the Expression Builder Form and running the Sales Ratio Study.

The Query Expression that was just created will appear in blue in the window on the Advanced Ratio Analysis Form. **NOTE: Even though the user has access to the text in the box to the right of the Query Expression button, the expression should only be modified after clicking the button, Query Expression. Modifications made in the**

box above will produce erroneous results. The user can now click the OK Button to run the Sales Ratio Study for all Residential Sales. Once the sales are analyzed and the sales ratios calculated, the Sales Ratio Analysis Form will appear, similar to the one below.

The dialog box titled "WinGAP - Sales Ratio Analysis" contains the following data and controls:

	LCI	Actual	UCI
Median	0.4000	0.4104	0.4178
Aggregate	0.4018	0.4106	0.4194
COD	0.2841		
PRD	0.9687		

Below the table, there are input fields for:

- Number of Samples: 1,072
- Lowest Ratio: 0.1000
- Highest Ratio: 0.7000
- Min Sample Size: 32
- Standard Deviation: 0.2866

A "View Array" button is located next to the Highest Ratio field. At the bottom left is a "100%" zoom slider. On the right side, there are two sections:

- Print Options:** Radio buttons for "Summary" and "Details".
- Print Order:** Radio buttons for "Ratio", "Acre", "Parcel", "Neighborhood", "Grantor", "Grantee", and "Sale Class".

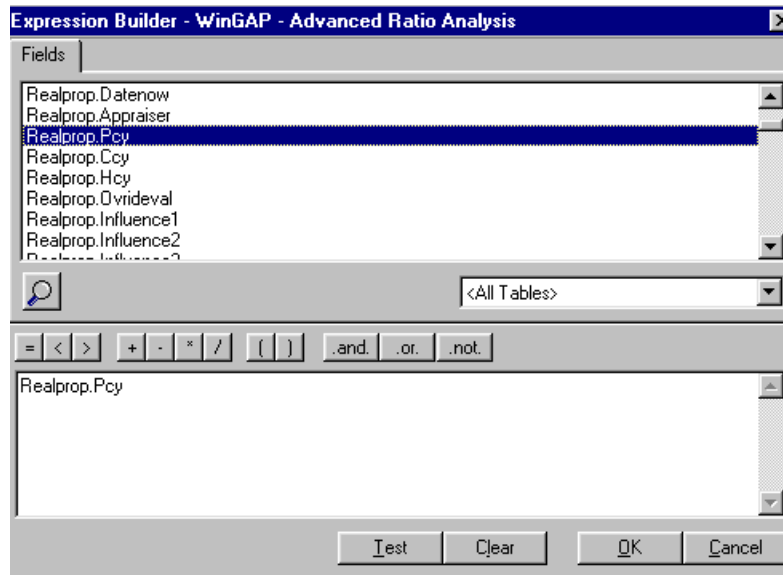

Buttons for "Print" and "OK" are located at the bottom right.

The Sales Ratio Analysis Form will display the sales ratios and other statistics and present the user with several options for printing the Ratio Study. The user can also look at a list of the sales that met the selection criteria and edit these sales if needed. The Sales Ratio Analysis Form was discussed under Basic Selection, earlier in this manual, and the user can refer to those pages for more information if desired.

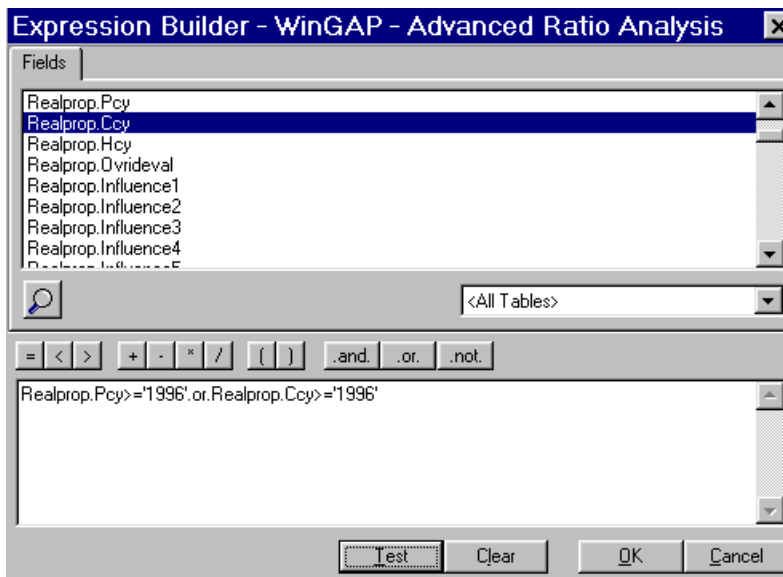

Example Two: a study of all sales for parcels that are under a Conservation Use or Preferential Assessment Covenant.

Parcels that are under a Conservation Use or Preferential Assessment covenant will have a beginning covenant year keyed in either the Pref YR field or the CUV YR field on the Real Property General Information Form. These fields are found in the Realprop database file. To run a Sales Ratio Study for parcels that are currently under a covenant, and the appraisal year is 2006, the date keyed in either the Pref YR or CUV YR field needs to be no more than 10 years PRIOR to the current appraisal year (2006), which would be the year 1997. And to use both that year and all years after 1997, the ">=" (greater than or equal to) operator should be used. The logical "or" operator will also be used in the expression to link the Pcy and Ccy fields. As previously mentioned, the speed of the process is greatly enhanced if a criteria from Saleinfo is used. In situations where Saleinfo data is not critical to the results of the query, the user can use a criteria as basic as `year(saleinfo.saledate) > 1800`.

Once on the Expression Builder Form, the user should locate the Realprop database, and then the field that contains the Preferential Assessment Year, which is Pcy, and double click on it as shown below.

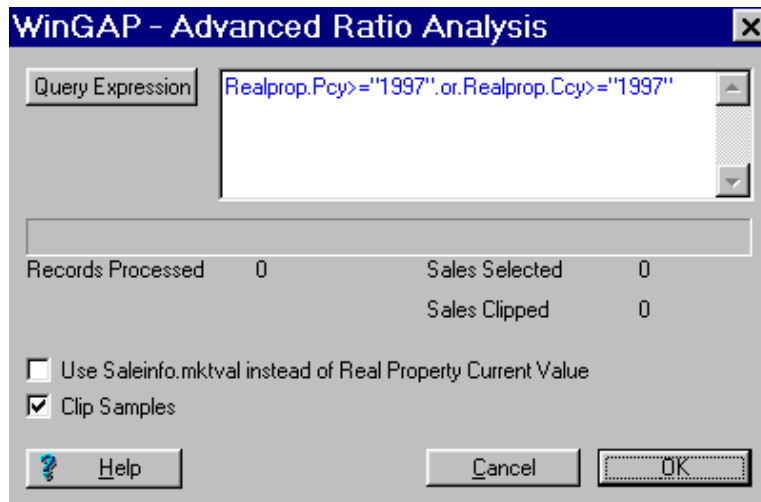

The user should click the ">" button, then the "=" button, and then key "1997" to the right of the greater than sign to set the condition. The "1997" is delimited because the PCY field in Realprop is a character field. Next, the condition must also be set for those parcels under Conservation Use. The OR operator is used to link the Preferential and Conservation Use year conditions, as either one can be true for this example. After clicking the OR operator, the user should double click on the Ccy field, then the greater than button, then the "=" button, and then key "1997" again. When the user has finished constructing the Query Expression, it should appear similar to the example shown below.

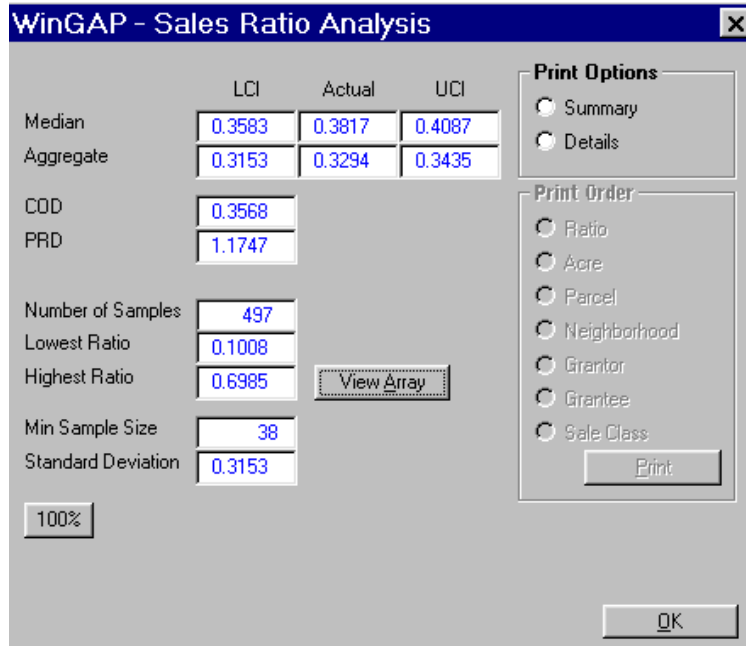

WinGAP Administration

The Test Button should be clicked to "test" the Query Expression. If the Query Expression is valid, the OK button is clicked to return to the Advanced Ratio Analysis Form, below, where the Query Expression will appear in the window on the Form.

The dialog box titled "WinGAP - Advanced Ratio Analysis" features a "Query Expression" label and a text field containing the expression "Realprop.Pcy>="1997".or.Realprop.Ccy>="1997". Below the text field is a progress bar. Further down, there are four status fields: "Records Processed" (0), "Sales Selected" (0), "Sales Clipped" (0), and an unchecked checkbox for "Use Saleinfo.mktval instead of Real Property Current Value". A checked checkbox for "Clip Samples" is also present. At the bottom, there are buttons for "Help" (with a question mark icon), "Cancel", and "OK".

The user can now click the OK Button to run the Sales Ratios Study for all sales for parcels under a Preferential or Conservation Use covenant. Once the sales are analyzed and the sales ratios calculated, the Sales Ratio Analysis Form will appear, similar to the one below.

The dialog box titled "WinGAP - Sales Ratio Analysis" displays calculated sales ratios and statistics. It includes a table with columns for LCI, Actual, and UCI values for Median and Aggregate ratios, as well as COD and PRD values. Below the table are fields for Number of Samples (497), Lowest Ratio (0.1008), Highest Ratio (0.6985), Min Sample Size (38), and Standard Deviation (0.3153). A "View Array" button is located next to the Highest Ratio field. On the right side, there are "Print Options" (Summary or Details) and "Print Order" (Ratio, Acre, Parcel, Neighborhood, Grantor, Grantee, Sale Class) sections, each with a "Print" button. At the bottom right is an "OK" button.

	LCI	Actual	UCI
Median	0.3583	0.3817	0.4087
Aggregate	0.3153	0.3294	0.3435
COD	0.3568		
PRD	1.1747		

The Sales Ratio Analysis Form will display the sales ratios and other statistics and present the user with several options for printing the Ratio Study. The user can also look at a list of the sales that met the selection criteria and edit these sales if needed. The Sales

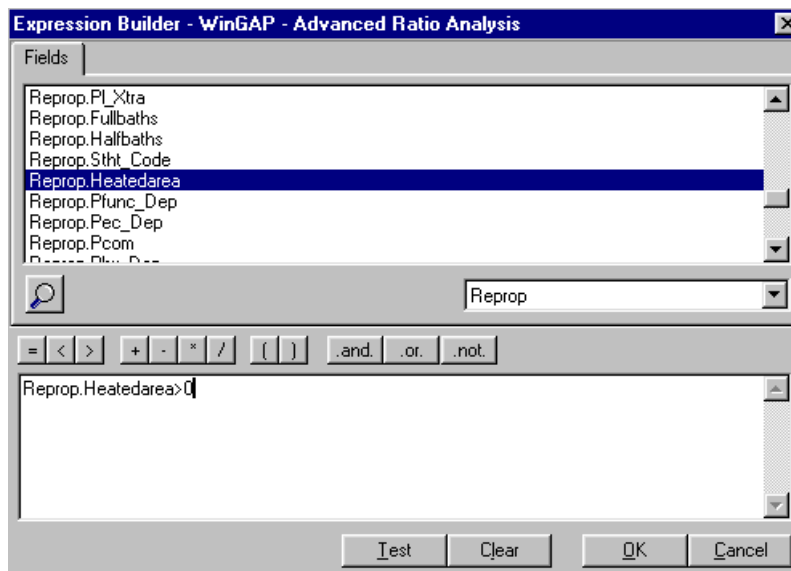

Ratio Analysis Form was discussed under Basic Selection, earlier in this manual, and the user can refer to those pages for more information if desired.

Example Three: a study of all sales for houses that have a square foot value less than \$30 / Square Foot.

Data on houses in WinGAP is found in the Reprop database file. The \$ / square foot value of a house is calculated by taking the calculated value of the house, found in the Timp_val field, and dividing this value by the square footage of the house, found in the heatedarea field. The user will need to employ four operators in this Query Expression:

1. the relational ">" (greater than) operator;
2. the logical "and" operator;
3. the mathematical "/" (divide) operator; and
4. the relational "<" (less than) operator.

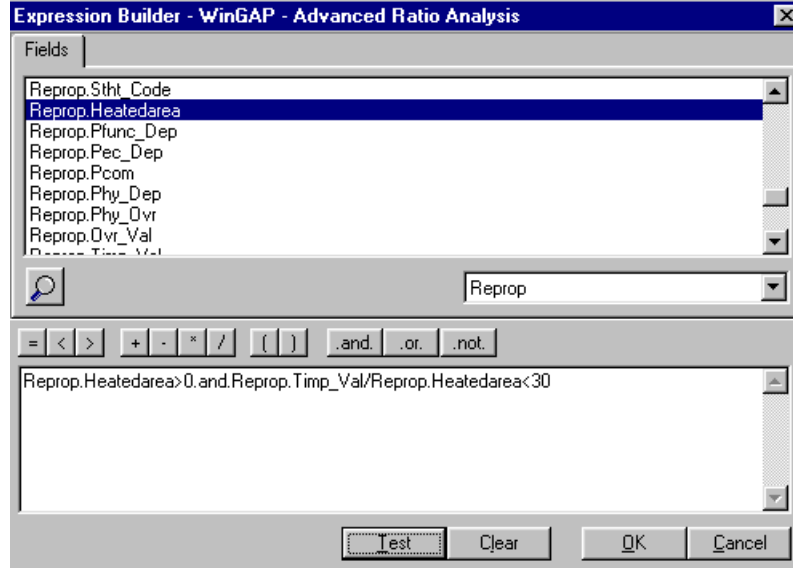

Once on the Expression Builder Form, the user should locate the Reprop database, and then the field that contains the square footage of the house, which is Heatedarea, and double click on this field to place it in the lower window on the Expression Builder Form. Since division by zero is not allowed in any Query Expression, a condition must first be set to prevent the Query Expression from using any Heatedarea values of zero. This is done by clicking the ">" (greater than) operator and placing it after the Heatedarea field in the expression, followed by a "0" (zero), as shown below.

This condition must now be linked with the expression that will produce only those houses with a \$ / square foot value less than \$30. The logical "and" operator is used to link the expressions, followed by the Timp_val / Heatedarea calculation, as shown on the next page.

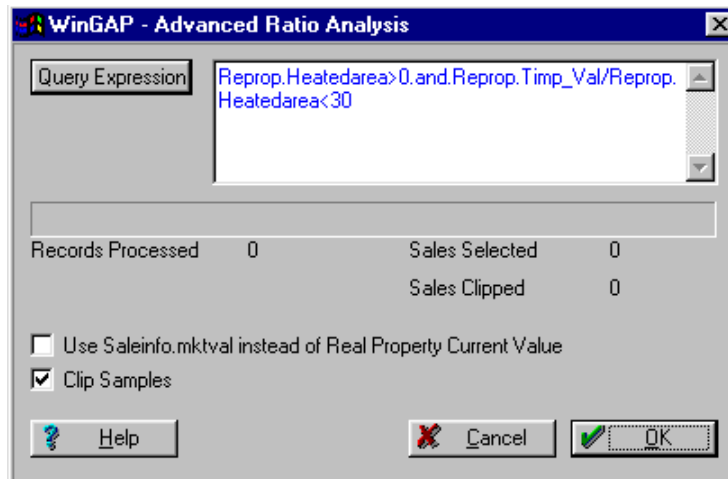

The final step in building the expression is to limit it to those houses that have a value under \$30 per square foot. This is done by keying the less than operator (" $<$ "), then keying 30 after the less than operator. When the user has finished constructing the Query Expression, it should appear similar to the example shown below.

(As previously mentioned, the speed of the process is greatly enhanced if a criteria from Saleinfo is used. In situations where Saleinfo data is not critical to the results of the query, the user can use a criteria as basic as `year(saleinfo.saledate) > 1800`.)

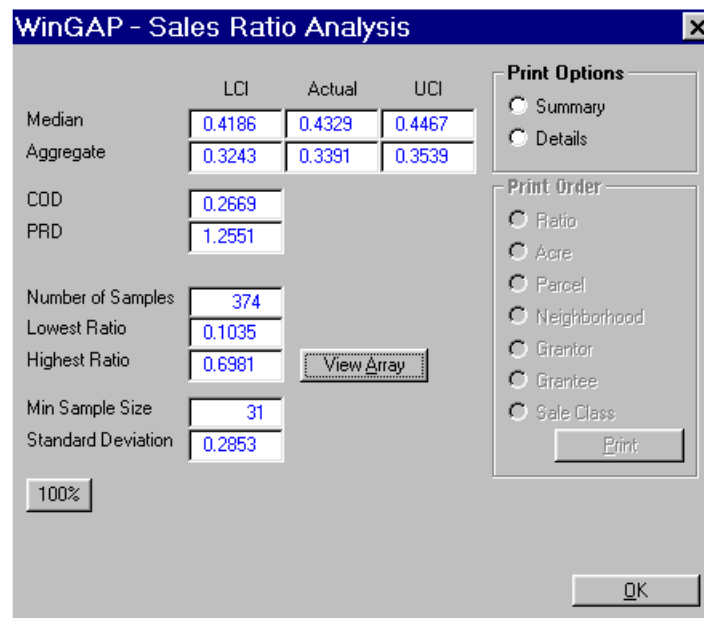

WinGAP Administration

The Test Button should be clicked to "test" the Query Expression. If the Query Expression is valid, the OK button is clicked to return to the Advanced Ratio Analysis Form, where the Query Expression will appear in the window on the Form, below.

The dialog box titled "WinGAP - Advanced Ratio Analysis" contains a "Query Expression" field with the text "Reprop.Heatedarea>0.and.Reprop.Timp_Val/Reprop.Heatedarea<30". Below this field are four status labels: "Records Processed" (0), "Sales Selected" (0), "Sales Clipped" (0), and "Sales Clipped" (0). There are two checkboxes: "Use Saleinfo.mktval instead of Real Property Current Value" (unchecked) and "Clip Samples" (checked). At the bottom are three buttons: "Help" (with a question mark icon), "Cancel" (with a red X icon), and "OK" (with a green checkmark icon).

The user can now click the OK Button to run the Sales Ratios Study for all sales for houses that have a square foot value less than \$30 per square foot. Once the sales are analyzed and the sales ratios calculated, the Sales Ratio Analysis Form will appear, similar to the one below.

The dialog box titled "WinGAP - Sales Ratio Analysis" displays various statistics and options. It includes a table with columns LCI, Actual, and UCI. The statistics shown are Median (0.4186, 0.4329, 0.4467), Aggregate (0.3243, 0.3391, 0.3539), COD (0.2669), PRD (1.2551), Number of Samples (374), Lowest Ratio (0.1035), Highest Ratio (0.6981), Min Sample Size (31), and Standard Deviation (0.2853). There is a "View Array" button next to the Highest Ratio. On the right, there are "Print Options" (Summary, Details) and "Print Order" (Ratio, Acre, Parcel, Neighborhood, Grantor, Grantee, Sale Class) sections. A "Print" button is located below the Print Order section. At the bottom right is an "OK" button.

	LCI	Actual	UCI
Median	0.4186	0.4329	0.4467
Aggregate	0.3243	0.3391	0.3539
COD	0.2669		
PRD	1.2551		
Number of Samples	374		
Lowest Ratio	0.1035		
Highest Ratio	0.6981		
Min Sample Size	31		
Standard Deviation	0.2853		

The Sales Ratio Analysis Form will display the sales ratios and other statistics and present the user with several options for printing the Ratio Study. The user can also look at a list of the sales that met the selection criteria and edit these sales if needed. The Sales Ratio Analysis Form was discussed under Basic Selection, earlier in this manual, and the user can refer to those pages for more information if desired.

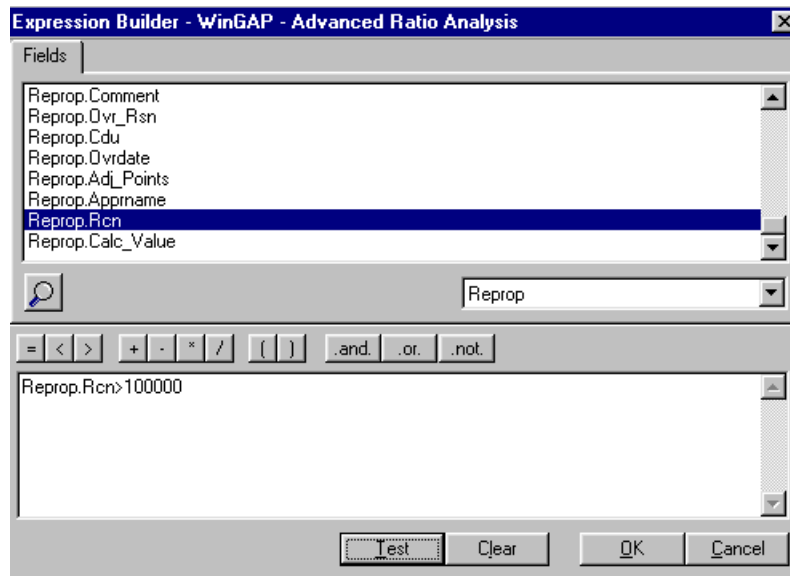

Example Four: a study of all sales for houses that have a replacement cost new value greater than 100,000.

Since this example uses house data, the Reprop database file will again be used. The replacement cost new value of a house is found in the RCN field. (NOTE: The County MUST have run Reappraise for Real Property at least once in order for this field to be populated with values). The user will need to employ just one operator, the relational ">" (greater than) operator, in this Query Expression.

Once on the Expression Builder Form, the user should first locate the Reprop database, and then the RCN field, and double click on it as shown below.

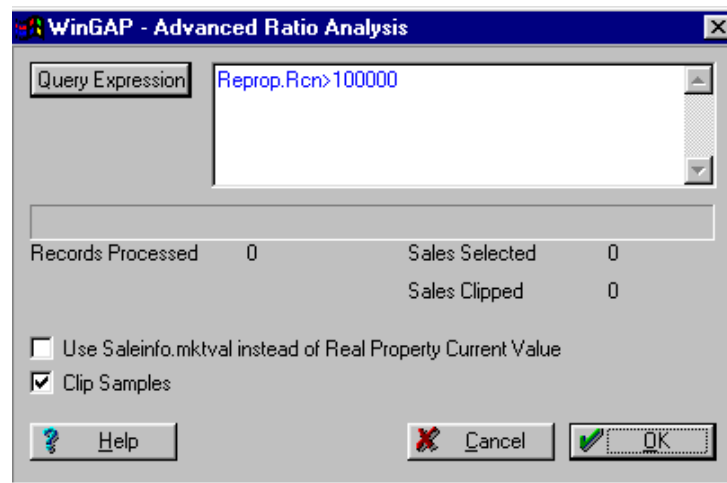

The sales ratio study example was for sales for all houses with a RCN value greater than \$100,000. The user should key the greater than sign (">"), then key 100000 after the greater than operator. When the user has finished constructing the Query Expression, it should appear similar to the example shown on the next page.

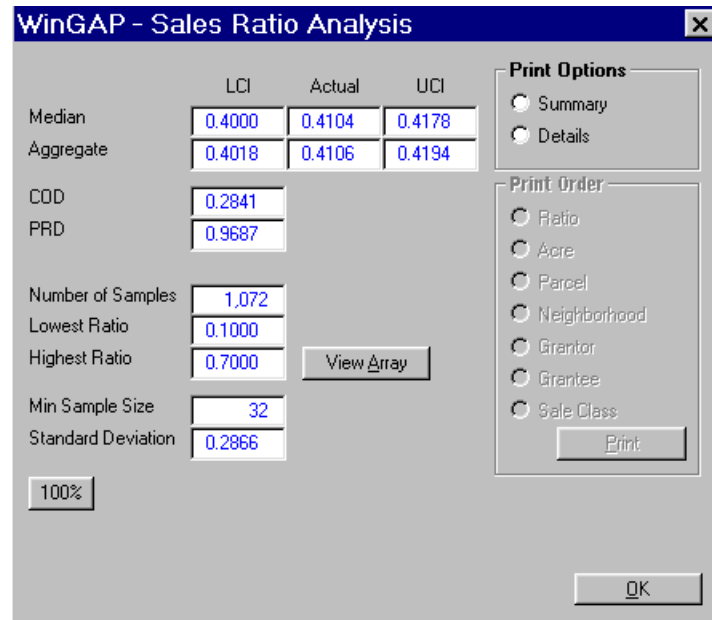

(As previously mentioned, the speed of the process is greatly enhanced if a criteria from Saleinfo is used. In situations where Saleinfo data is not critical to the results of the query, the user can use a criteria as basic as year(saleinfo.saledate) > 1800.)

The Test Button should be clicked to "test" the Query Expression. If the Query Expression is valid, the OK button is clicked to return to the Advanced Ratio Analysis Form, where the Query Expression will appear in the window on the Form, as shown below.

The user can now click the OK Button to run the Sales Ratios Study for all sales for houses with a replacement cost new greater than \$100,000. Once the sales are analyzed and the sales ratios calculated, the Sales Ratio Analysis Form will appear, similar to the one on the next page.

The dialog box titled "WinGAP - Sales Ratio Analysis" displays various statistical data and printing options. It includes a table for LCI, Actual, and UCI values, a "Print Options" section with radio buttons for Summary and Details, a "Print Order" section with radio buttons for Ratio, Acre, Parcel, Neighborhood, Grantor, Grantee, and Sale Class, and a "Print" button. A "View Array" button is also present.

	LCI	Actual	UCI
Median	0.4000	0.4104	0.4178
Aggregate	0.4018	0.4106	0.4194
COD	0.2841		
PRD	0.9687		
Number of Samples	1,072		
Lowest Ratio	0.1000		
Highest Ratio	0.7000		
Min Sample Size	32		
Standard Deviation	0.2866

The user can also look at a list of the sales that met the selection criteria and edit these sales if needed. The Sales Ratio Analysis Form was discussed under Basic Selection, earlier in this manual, and the user can refer to those pages for more information if desired.

Neighborhood Analysis

The Neighborhood Analysis option on the Sales Analysis Menu, below, provides a tool that the Assessors' Office can utilize in the generation of ratio studies based on Neighborhoods

NOTE: For Neighborhood Analysis to function properly, the County must set up Neighborhoods in **Tools >> Schedules / Tables > Neighborhoods**.

Clicking on this option will produce the Neighborhood Ratio Analysis Form, below.

Neighborhood List Box

The left side of the Form contains a list box of all the Neighborhoods in the County, arranged in alphabetical (descending) order. The user can move around the list box to select Neighborhoods for inclusion in the Ratio Study by using the arrow keys, the page up and down keys, and the home and end keys on the keyboard. The user can also press the first letter in the name of a Neighborhood and go directly to the first Neighborhood that begins with that letter. The mouse can also be used to move around in the list box by clicking on the "thumb" in the vertical scroll bar and dragging it up or down.

Sales Criteria

Neighborhood Ratio Studies are run based upon a more limited set of Sales Criteria than Ratio Studies that are run using either the Basic Selection or Advanced Query methods. The fields on the Form use the information keyed on the Sales Form when adding sales to Real Property.

Date Range fields

- **Start:** The Start field is where the Starting Date for sales to be used in the Ratio Study is keyed. The date keyed in this field is inclusive. For example, if the user wants a Study of all sales after January 1, 2002, then 01/02/2002 would be keyed in this field. The Start date field should be left blank if it is not to be used as a criteria in the Ratio Study.
- **End:** The End field is where the Ending Date for sales to be used in the Ratio Study is keyed in the same manner as the Start date. Like the Start date, the date keyed in the End date field is inclusive. The End date field should be left blank if it is not to be used as a criteria in the Ratio Study.

Sale Class fields

- Four checkboxes are available where the Sales Classification of the sale can be selected to further qualify the Ratio Study. Any or all of the checkboxes can be selected. If all of the Class checkboxes are left blank, the Sales Class will be ignored in the selection of sales.

Sales Reason fields

- Two checkboxes and a combo box are available to set criteria for the Sale Reasons to be used for the Ratio Study. If only the **FM** (Fair Market) checkbox is checked, and the combo box left blank, only sales with a Sales Reason of Fair Market will be used. If only the **LM** (Land Market) checkbox is checked, and the combo box left blank, only sales with a Sales Reason of Land Market will be used. If both the FM and LM checkboxes are checked, and the combo box left blank, only sales with a Sales Reason of Fair Market or Land Market will be used. The FM and/or LM checkboxes can also be used with any of the Sale Reasons in the combo box to run a Ratio Study. Finally, the FM and LM checkboxes can be left blank and a specific reason in the Sales Reason combo box can be used to run a Ratio Study for a specific type of Sale Reason.

Neighborhoods Selected List Box

Beneath the Sales Reason section of the Form is a list box that will display all of the Neighborhoods selected for the Ratio Study. Neighborhoods are placed in the list box by using the four arrow buttons located to the left of the Neighborhoods Selected list box, as seen on the next page.

Neighborhoods Selected (1)

The top button, with two arrows on it pointing to the right, will place all of the Neighborhoods in the Neighborhood list box on the left side of the Form into the Neighborhoods Selected list box. The next button, with one arrow pointing to the right, will place any selected Neighborhoods from the Neighborhood list box on the left of the Form into the Neighborhoods Selected list box. The third button, with one arrow pointing to the left, will remove any selected Neighborhoods from the Neighborhoods Selected list box on the right side of the Form. The bottom button, with two arrows in it pointing to the left, will remove all of the Neighborhoods in the Neighborhood list in the Neighborhoods Selected list box.

Selecting Neighborhoods

One Neighborhood can be selected for inclusion in the Ratio Study by clicking on the desired item in the Neighborhood List Box, as seen on the next page.

Once all of the Neighborhoods to be included in the Ratio Study have been selected, and the Starting and Ending Sales Dates, Sales Classes, and Sales Reasons have been selected on the Analysis form, the Go Button on the lower right of the Neighborhood Ratio Analysis form should be clicked. After the records are processed, the Neighborhood Analysis Results form will appear, as seen below.

Neigh	Description	med	med_lci	med_uci	agg	agg_lci	agg_uci	cod	pr
00005	MANASSAS	0.3869	0.1600	0.5857	0.4424	0.3392	0.5456	0.3932	0.8725

The Neighborhoods will be listed in Neighborhood Code order on the Results form, and Neighborhoods that have no Sales for the criteria entered will be highlighted in BLUE.

Listed left to right on Results Form are the following:

- ☐ The **Neighborhood Code**, as defined by WinGAP for that Neighborhood.
- ☐ The **Neighborhood Description**, as entered by the County in the Neighborhood Schedule.
- ☐ The **Median Actual Ratio**. The Median Actual Ratio is a measure of central tendency that indicates the midpoint of the array of the sales ratios. The Median Ratio is the statistic used to determine the level of assessment for the study.
- ☐ The **Median Lower Confidence Interval**. The Median Lower Confidence Interval is used to determine digest acceptance if the Median Actual Ratio is less than .36.

- The **Median Upper Confidence Interval**. The Median Upper Confidence Interval is used to determine digest acceptance if the Median Actual Ratio is more than .44.
- The **Aggregate Actual Ratio**. The Aggregate Actual Ratio is the weighted average of the sales. It is calculated by dividing the sum of the assessments by the sum of the sales prices.
- The **Aggregate Lower Confidence Interval**. If the PRD(Price Related Differential, explained below) is outside of acceptable ranges and the Aggregate Actual Ratio is used to determine the assessment level, the Aggregate Lower Confidence Interval must fall within a ratio range of .36 to .44, unless the Aggregate Upper Confidence Interval (see below) is within this same range.
- The **Aggregate Upper Confidence Interval**. If the PRD is outside of acceptable ranges and the Aggregate Actual Ratio is used to determine the assessment level, the Aggregate UCI (Upper Confidence Interval) Ratio must fall within a ratio range of .36 to .44 to allow for assessment level acceptance.

The table below provides an illustration of the use of the UCI and LCI.

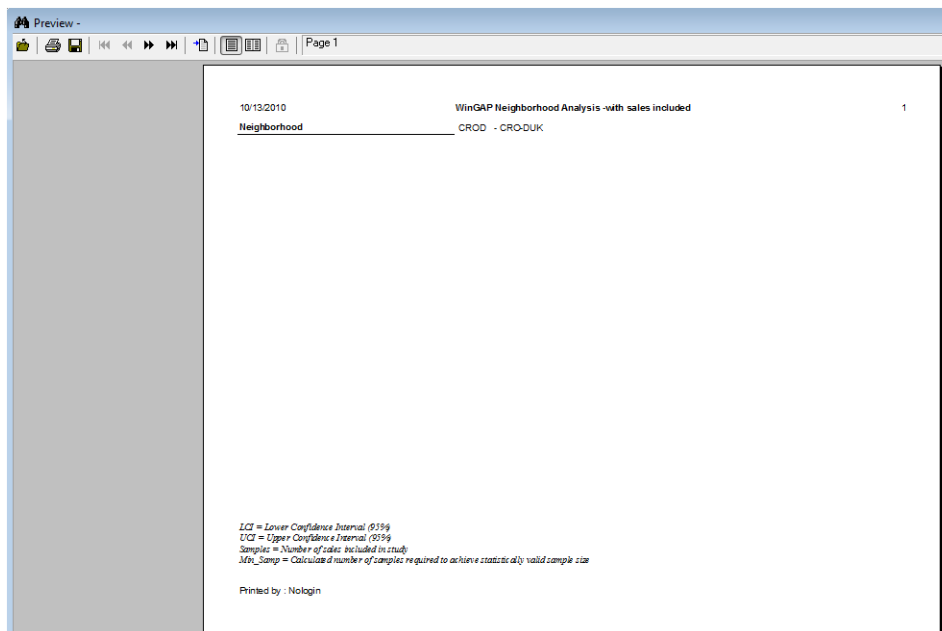

LCI	AGG	UCI	
32	34	36	Pass (UCI falls within (overlaps) acceptable range)
28	30	32	Fails
26	32	38	Pass (UCI falls within (overlaps) acceptable range)

- The **Coefficient of Dispersion**. The COD, or Coefficient of Dispersion, measures the degree of uniformity in the study. The COD is calculated by first determining the absolute deviation from the median for each sale (Ratio-Median). The average of the deviations is then calculated. The average deviation is then divided by the median ratio to produce the COD. The COD should be less than .15 for residential property and less than .20 for agricultural, commercial, and industrial properties.
- The **Price Related Differential**. The PRD, or Price Related Differential, is used to measure assessment bias in a ratio study. The PRD should fall between .95 and 1.10. It is calculated by dividing the mean ratio by the aggregate ratio. If the PRD is greater than 1.00, the lower priced properties generally have higher ratios than the higher priced properties. The study is exhibiting regressivity. If the PRD is less than 1.00, the higher priced properties are overvalued compared to the lower priced properties. The study exhibits progressivity.
- The **Number of Samples**. The number of sales that are included in the Ratio Study for that Neighborhood.
- The **Lowest Ratio**. The Lowest Ratio of any sale that meets the selection criteria and is used in the Ratio Study.

Print With Sales Button

The **Print With Sales** Button, also on the lower left of the Results form, can be clicked to display a Print Preview of the Neighborhood Ratio Study, with sales, as seen below.

The first page of the Sales Included report shows the Neighborhood name for the first Neighborhood.

The second page shows the actual sales included on this Ratio Study for this Neighborhood. There may be more than one page for each Neighborhood.
